North Carolina Utilities Commission

1985 Report — VOL. XVI

**Major Activities — April 1984 through March 1985
with
Statistical and Analytical Data Through 1983**

LETTER OF TRANSMITTAL

July 1, 1985

The Honorable James G. Martin
The Governor of North Carolina
Raleigh

Dear Governor Martin:

We hereby present for your consideration the 1985 Report of the North Carolina Utilities Commission pursuant to Section 17 of the Public Utilities Act of 1963 as amended in 1977 (G.S. 62-17). The report covers the major activities of the Commission for the period April 1984 through March 1985 with statistical and analytical data for the operations of the utilities through 1983.

Respectfully submitted,
Dr. Robert K. Koger, Chairman
Sarah Lindsay Tate, Commissioner
Edward B. Hipp, Commissioner
A. Hartwell Campbell, Commissioner
Ruth E. Cook, Commissioner
Robert O. Wells, Commissioner
Julius A. Wright, Commissioner

Prepared by

North Carolina Utilities Commission
Finance, Statistics, Budget & Planning Division
P.O. Box 29510 Raleigh, NC 27606-0510
Telephone No. 919/733-7680

E. HISTORICAL SKETCH OF DEVELOPMENT

The present North Carolina Utilities Commission evolved from the Railroad Commission which was created in 1891 by the General Assembly and was given authority to determine charges made for services rendered by railroads, steamboat or canal companies, express and telegraph companies.

The major changes occurring in North Carolina regulatory field since 1891 are in chronological order as follows:

- 1893—Telephone industry brought under regulation.
- 1897—Street railways brought under regulation.
- 1899—Railroad Commission abolished and the North Carolina Corporation Commission created. The North Carolina Corporation Commission was given general supervision of railroads, steamboat navigation and canal companies, express and telegraph and telephone companies, building and loan associations, banks, and sleeping car companies.
- 1900—The Corporation Commission's duties enlarged to encompass general supervision over tax listers and tax assessors.
- 1905—Supervision of building and loan association transferred to State Insurance Commissioner.
- 1913—Electric light, power, water, and gas companies, excluding municipally owned, came under regulation.
- 1925—Capital Issues Law administered by the Corporation Commission. Motor vehicle common carriers of persons and property over regular or specified routes brought under regulation.
- 1931—Transfer of banking department to the Commissioner of Banks.
- 1933—The Corporation Commissioner abolished. The office of Utilities Commissioner created with two associate commissioners.
- 1937—Administration of Capital Issues Law transferred to Secretary of State.
- 1941—The North Carolina Utilities Commission established, consisting of three full-time members with six-year terms.
- 1947—Motor Vehicle common and contract carriers of property over irregular routes brought under regulation and regulation implemented.
- 1949—Bus Act of 1925 replaced and jurisdiction over common and contract carriers of passengers, regular and irregular routes, expanded. Membership increased to five commissioners and a technical staff of engineers, accountants, and directors of transportation added.

1963—The utility laws of North Carolina updated and rewritten.

1965—Electric Membership Corporation brought under limited jurisdiction of the Utilities Commission relating to assignment of service and promotional payments.

1967—The following amendments to the General Statutes 62 known as the Public Utilities Act are of significance to the public and the regulatory agency:

- a. Initiation of Cooperative Agreement in the enforcement of interstate motor carriers safety regulations with the Interstate Commerce Commission. (G.S. 62-266)
- b. Authorization for the Utilities Commission to collect same fees for registration of interstate authority and interstate vehicles as is charged intrastate carriers. (G.S. 62-300)
- c. Authority to regulate the standards of safety for interstate natural gas pipelines passing through North Carolina (G.S. 62-41 and G.S. 62-43)
- d. Change in appeal procedure of Utility Cases; they now go to the Court of Appeals rather than to the Superior Courts. (G.S. 62-90)

1969—The following amendments to the General Statutes 62 known as the Public Utilities Act are of interest to the general public and the regulatory agency:

- a. *Register ICC Exemptions.* Authorization for the Commission to require *all* interstate carriers to file copies of their respective interstate authority or register their *exempt* operation. The registration for the ICC exempt carriers for the first time is the significant feature of this act. (G.S. 62-266)
- b. *Inspect Utility Affiliate Records.* Authorization for the Commission to inspect the books and records of corporations affiliated with public utilities regulated by the Commission, including parent corporations and their affiliates. (G.S. 62-51)
- c. *Furnish False Information to the Utilities Commission; Failure to Furnish Information to Commission.* Action by legislature declaring it a misdemeanor for utilities under the jurisdiction of the Commission to furnish false information or for failure to furnish information on report forms furnished by the Commission. (G.S. 62-326)
- d. *Radio Common Carriers.* Commission authority extended to grant Certificates

of Public Convenience and Necessity to radio common carriers in areas where the landline telephone company has heretofore protested certificates of radio common carriers. (G.S. 62-120)

1971—The following amendments to the General Statutes 62, known as the Public Utilities Act, were approved by the General Assembly in the current year:

- a. The Executive Organization Act of 1971 created the N.C. Department of Commerce, (143A-174). The North Carolina Utilities Commission was transferred to the Department of Commerce. (G.S. 62-10)
- b. *Safety Standards for Interstate and Intrastate Natural Gas Pipelines*. Authorization by the General Court of Justices of North Carolina to issue court orders, restraining orders, injunctions and other processes of the court in actions by the Utilities Commission to enforce the provisions of gas pipeline safety, and authorizing the Commission to bring such action as may be necessary for compliance. (G.S. 62-50)
- c. *How Rates Fixed—Natural Gas Distribution Companies*. Utilities Commission given permission to permit gas companies to increase their rates to customers to the extent that such increases are occasioned by increases in the wholesale rates paid by the utilities. This increase could be allowed without a general rate case hearing. (G.S. 62-133)
- d. *Change in definition of "Public Utility."* Prior to 1971, those persons or companies selling water to less than 25 residential customers were, by statute, exempt from Utilities regulation. 1971 legislation modified the definition of a public utility to include anyone furnishing water to 10 or more residential customers. (G.S. 62-3)

1973—The following amendment to the General Statutes 62, known as the Public Utilities Act, were approved by the General Assembly in the current year:

- a. Change in definition of "public utility." Town of Pineville, N.C., included insofar as town supplies telephone service to the public for compensation. This includes town limits as of May 8, 1973, and shall also include area proposed to be annexed, until January 1, 1975. Utility Commission has no authority in respect to rates or charges for service until July 1, 1974. (G.S. 62-3 (23) f)

Related Statute - Electric Service in Urban Areas. **Authority and Jurisdiction of Utilities Commission** G.S. 160-A-334 rewritten as follows:

If N.C. Utilities Commission finds that service being furnished to consumer by a secondary supplier to be inadequate or undependable, or that rates are unreasonably discriminatory, the Commission shall have the authority and jurisdiction after notice to each affected electrical supplier, and after hearing, if hearing is requested, to:

Order a primary supplier that is subject to the jurisdiction of the Commission to furnish electric service to any consumer who desires service from the primary supplier at any premises served by a secondary supplier, and to order such secondary supplier to cease and desist from furnishing electric service.

1974—The following selected Legislative Bills of significance to the operations of the utilities, the utilities ratepayers, and the Commission itself were passed by the General Assembly in the 2nd Session (1974) of the 1973 Session and along with other utility bills not listed here are included in General Statutes 62, known as the Public Utilities Act:

- a. *How Rates Fixed — Small Water and Sewer Utilities*. The Commission may now fix such rates on the ratio of the operating expenses to the operating revenues such ratio to be determined by the Commission, unless the utility requests that such rates be fixed under G.S. 62-133 (b). Previously only motor carrier rates were determined in relation to an operating ratio. (G.S. 62-133.1 (a))

A water or sewer utility may enter into uniform contracts with nonusers of its utility service within a specific subdivision or development for the payment by such nonusers to the utility of a fee or charge for placing or maintaining lines or other facilities or, otherwise, making and keeping such utility's service available to such nonusers which in effect is an availability charge. (G.S. 62-133.1 (b))

- b. *Future Test Period Authorized*. Authority given to the Commission, in its discretion, to use a current as well as a past test period in establishing public utility rates. This change gave the Commission authority to use a 12-month future test period for setting rates which

required the extensive use of estimated and forecasted operating data in addition to actual historical data. (G.S. 62-133(c)) (The General Assembly, during the 1975 Session, amended G.S. 62-133(c) by rewriting the second sentence of Subsection (c) and in effect restoring the test period used in general rate cases to 12 months historical operating expenses prior to the date the proposed rates are to become effective.)

- c. *Less than the Full Commission May Hear Small Utility Rates Cases* — In matters where total annual revenue requested or where total annual revenues increase requested is less than \$50,000 even though all rates are affected, the Chairman of the Commission may refer the matter to a division of the Commission, to a Hearing Commissioner, or to a Hearing Examiner for hearing. Previously, the full Commission was required to hear all general rate cases. (G.S. 62-81) *Increased to \$100,000 by 1977 legislative amendment. Increased to \$300,000 by 1981 legislative amendment.

1975—Major legislation affecting the regulation of utilities:

- a. *Definition of the term "Panel."* Panel as used herein means three Commissioners, a division of the Utilities Commission authorized for the purpose of carrying out certain functions of the Commission. (G.S. 62-3)
- b. *Increase in the number of Commissioners from five (5) to seven (7).* All Commissioners henceforth are to be appointed by the Governor subject to confirmation by the General Assembly in joint session. (G.S. 62-10)
- c. *Initiation of Management Audits.* Management Audits may be initiated by the Commission of any public utility company once every five years by a competent, qualified and independent firm with the cost of such audit to be borne by the particular public utility subject to the audit. (G.S. 62-37 (b))
- d. *Procedure before the Commission.* The Commission shall sit in panels of three unless the Chairman, by Order, shall set the proceeding for hearing by the Full Commission. (G.S. 62-60.1)
- e. *Long Range Forecast.* The Commission is required to develop, publicize and keep current an analysis of the long-range needs for expansion of facilities for the generation of electricity in North Carolina, including its estimates of the

probable future growth of the use of electricity, the probable needed generating reserve, the extent, size, mix and general location of generating plants and arrangements for pooling power to the extent not regulated by the Federal Power Commission. (G.S. 62-110.1 (c, d, e, f))

- f. *Rate Changes due Solely to Changes in Cost of Fuel.* Effective on and after September 1, 1975, application by any public utility for permission and authority to increase its rates and charges based solely upon the increased cost of fuel used in generation or production of electric power must be suspended for a period not to exceed ninety (90) days. A hearing on the merits of the application must be held within thirty (30) days of the date of the filing with an Order responsive to the application being issued not later than ninety (90) days from the filing Date. A rate decrease due solely to a decrease in the cost of fuel, upon motion of the Commission or application of any person having an interest in said rate, shall be set for hearing. Any person directly interested in these proceedings shall have a full right of intervention. These types of proceedings shall not be considered a general rate case. To implement this new legislative act the Commission adopted a new Rule, R1-36 which prescribes the information and exhibits required to be filed with the application. (G.S. 62-134 (e) and (f))

1977—Major legislation affecting the regulation of utilities:

- a. *Creation of the Office of Executive Director and Public Staff to Represent the Using and Consuming Public.* The Commission personnel was divided into a Commission Staff and a Public Staff. The Office of Executive Director was established to direct the Public Staff. The Executive Director shall be appointed by the Governor subject to confirmation by the General Assembly in joint session. The term of the Executive Director shall be six years and the salary the same as that fixed for Commissioners. The Executive Director may be removed from office by the Governor in the event of his incapacity to serve; and the Executive Director may be removed from office by the Governor upon the affirmative recommendation of a majority of the Commission, concurred in by a majority of the Utility Review Committee of the General Assembly. The Public Staff shall not be subject to

the supervision, direction, or control of the Commission, the Chairman, or members of the Commission.

The Public Staff has the duty and responsibility to review, investigate, intervene and make recommendations to the Commission relating to practically all matters affecting the using and consuming public and especially in the following areas: rates charged for services, level and quality of service rendered, issuance or cancellation of certificates for service and service areas, complaints of consumers, transfers, mergers or consolidation of utilities providing services to the public, contracts of public utilities with and between affiliates or subsidiaries and the issuance of securities or other financial matters affecting the utilities. The Public Staff has no duty, responsibility or authority with respect to the enforcement of natural gas pipeline safety laws, rules or regulations or to the laws, rules or regulations of common, contract and exempt carriers relating to their equipment, the registration of their vehicles, insurance coverage, licensing or training of drivers or the operation of motor vehicle equipment. (For complete detail of duties of Public Staff, see G.S. 62-15 (a) thru (i).)

- b. *Gifts to Members of Commission, Commission employees, or Public Staff unlawful.* — Utilities may not offer nor may any member of the Commission, Commission Staff, or Public Staff accept any gift of money, property, or anything of value from the utilities. One violating this rule is guilty of a misdemeanor and may be fined and subject to dismissal for cause. A member of the Commission, Commission Staff or Public Staff may attend public breakfasts, lunches, dinners, or banquets sponsored by the regulated utilities. (G.S. 62-327)
- c. *Public Staff Provision Renewable After Four Years.* — Unless the General Assembly shall otherwise direct, effective August 31, 1981, the Office of Executive Director and the Public Staff of the Commission shall terminate and the positions assigned to the Public Staff shall be assigned to the Commission. (Session Laws 1977, c 468, s. 23)
- d. *Lifeline Rate Study.* — Resolution No. 63 urging the Utilities Commission to investigate and study Lifeline Rates for Consumers of electricity and natural gas was ratified by the General Assembly on June 14, 1977. Because of rapidly rising rates for electric and natural gas service and the great hardship the

higher rates were causing many elderly and low income persons in the State, the Commission was urged to study and consider whether it is just and reasonable to establish a category of lifeline rates for essential levels of use by residential customers to provide lighting, cooking and refrigeration in their primary place of residency.

- e. *Use of Original Cost plus Construction Work in Progress (CWIP) of public utilities property for rate-making purposes to be effective with respect to rate applications filed on and after July 1, 1979.* — Effective with rate applications filed on and after July 1, 1979, the Commission must use as the rate base for fixing rates of electric, gas, telephone and water and/or sewer utilities (unless the operating ratio is used for water and sewer companies) the reasonable original cost, less depreciation plus the reasonable original cost of construction work in progress (CWIP) of the public utility's property. This method replaces the currently used Fair Value formula (which excludes the value of CWIP) in determining the rate base for the fixing of rates. In conjunction with the enactment of the above amendment to G.S. 62-133 entitled "How rates fixed" the General Assembly also amended G.S. 62-2 entitled "Declaration of policy" by adding a new subsection (5) which reads as follows:

"(5) Require each public utility to discontinue capitalization of the composite carrying cost of capital funds used to finance construction (allowance for funds) on the construction work in progress included in its rate base upon the effective date of the first and each subsequent general rate order issued with respect to it after the effective date of this subsection; allowance for funds may be capitalized with respect to expenditures for construction work in progress not included in the utility's property upon which the rates were fixed. In determining net operating income for return, the Commission shall not include any capitalized allowance for funds used during construction on the construction work in progress included in the utility's rate base."

(See Session Laws 1977, c 691, ss. 2 & 3 for details of amendments to G.S. 62-133.)

- f. *Constitutional Amendment (Article V) to allow municipalities to Issue Revenue Bonds to Finance the Cost of Electric Generation and Transmission Facilities.*

— This related legislation authorizing municipalities owning or operating electric systems and joint agencies composed of such municipalities to jointly or severally own, operate and maintain an electric system and to use revenue bonds to finance the cost thereof, subject to the approval of the electorate directly affects the regulated electric companies of North Carolina. Duke Power Co. has already agreed to sell a portion of its nuclear generating capacity to nineteen (19) North Carolina towns and cities which are members of the North Carolina Municipal Power Agency No. 1. (See Session Laws 1977, c 528, sections 1 thru 6 for details of Constitutional Amendment.)

- g. *Uniform and Joint Rates Among Carriers of the Same Class Authorized.* Historically, tariff bureaus have been formed by common carriers for the purpose of establishing and publishing joint rates in order to achieve a stable rate structure. The enactment of Chapter 219 empowered the Commission to regulate and permit tariff bureaus to publish joint rates. (G.S. 62-152.1 and Commission Rule R4-12 set forth the Commission's requirement of a rate bureau in order for it to publish joint rates with this Commission.)

1979

& —Major legislation affecting the regulation
1980 of utilities

- a. *Office of Executive Director and the Public Staff Made Permanent on April 10, 1979.* These positions otherwise would have been terminated on August 31, 1981. (Session Laws 1979, c 332, 3.1)
- b. *Gas Pipeline Safety Standards Authority Expanded.* The Utilities Commission authority is expanded over natural gas pipeline safety standards to cover public housing authorities and apartment complexes or mobile home parks that distribute or submeter gas to their tenants. It also restates the Commission's existing authority over pipeline safety standards of interstate and intrastate gas utilities and pipeline carriers under franchise, as well as municipally owned distributors, without apparently changing the substance of this authority. (Session Laws 1979 c 269, G.S. 62-50)
- c. *Ex-parte Communications.* The act was amended which forbids any nonwritten communication by a public utility or public staff member to a Commission member or hearing examiner relating to the level of rates to be charged by deleting the words "with regard to matters affecting the rates charged or pro-

posed to be charged" and inserting in lieu thereof the words "regarding the level of rates specifically proposed to be charged." Article IV, G.S. 62-70(g) (Session Laws 1979, c 332, S.2.)

- d. *Encouragement of Co-generation of Electricity.* Co-generation of electricity was encouraged by exempting from regulation persons who are constructing or operating an electric generating unit primarily for their own use and not for the primary purpose of producing electricity, heat, or steam for sale to or for the public for compensation. However, such persons must report to the Utilities Commission the proposed construction of such a facility before construction begins. (G.S. 62-110.1(g))
- e. *Power Sales by Small Power Producers.* In the event that a small power producer and an electric utility are unable to mutually agree to a contract for the sale of electricity or to a price for the electricity purchased by the electric utility the Commission shall require the utility to purchase the power, under rates and terms established under G.S. 62-156. (See Session Laws 1979, 2nd Session, 1980, c 1219, S.2.)
- f. *Security Provisions Relating to Access to Nuclear Power Facilities and/or Control over Nuclear Material.* The Chief Personnel Officer or his designee of any public utility franchised to do business in North Carolina shall be permitted to obtain from the State Bureau of Investigation a confidential copy of criminal history record information for screening an applicant for employment with or an employee of a utility or utility contractor where the employment or job to be performed falls within a class or category of positions certified by the North Carolina Utilities Commission as permitting or requiring access to nuclear power facilities or access to or control over nuclear material. (G.S. 62-333) (See Session Laws 1979, c 796.)
- g. *Motor Carriers Providing "Charter Party" Services for Senior Citizens Exempt from Regulation.* Motor passenger carriers engaged in "Charter Party" service for senior citizens (60) years or older are exempt from Commission regulation except for subsections (f) and (g) of Article 12 G.S. 62-260. These sections deal with security, safety and registration regulations of motor passenger carriers and their vehicles. (G.S. 62-260 a(18)) (See Session Laws 1979, c 204.)

1981—Major Legislation Affecting the Regulation of Utilities:

- a. *Rate-setting Hearings Nonmandatory When There Is No Significant Public Protest and All Parties Are in Agreement.* When there is no significant public protest received within 30 days of the publication of notice of a proposed rate change for a water or sewer utility, the Commission may decide the preceeding based on the record without a trial or hearing, provided said utility and all other parties of record have waived their right to any such hearing. (G.S. 62-81(f)) (HB 530)
- b. *Commission Authorized to Decide the Level of Interest to Add to Customer Refunds.* The Commission under the amended law can decide the level of interest rate public utilities must pay on refunds of moneys to its customers which were advanced by or overcollected from its customers. Under the amended law the rate cannot exceed ten percent (10%) per annum, previously the only rate was six percent (6%) per annum. (G.S. 62-130(e) and G.S. 62-135(c) (HB 531)
- c. *The Utility Company Shall Be the Source of Funds for the Public Staff to Employ Outside Assistance in Commission Proceedings.* The Executive Director of the Public Staff is authorized to employ, subject to the approval of the State Budget Officer, expert witnesses and such other professional expertise as deemed necessary to assist the Public Staff in its participation in Commission proceedings, and the compensation and expenses therefor shall be paid by the utility or utilities participating in said proceedings. Before this enactment, the funds for this type service came from the regular appropriated Public Staff budget or from the State Contingency and Emergency Fund. (G.S. 15(h)) (HB 529)
- d. *Employment of Temporary Court Reporters With Costs to Be Borne by Individual Utility or Utilities.* The Commission is authorized to contract with or employ on a temporary basis, when deemed necessary by the Chairman of the Commission, court reporters in addition to those employed on a full-time basis by the Commission for the purpose of recording and transcribing testimony given at hearings before the Commission involving any Class A & B utility. The costs for these court reporters are to be charged directly to the involved utility or utilities. (G.S. 62-7(d)) (SB 639)

1982—Major Legislation Affecting the Regulation of Utilities (1982 Short Session)

Changes in Method and Times Per Year the Fuel Clause Adjustment May be Considered and the Treatment of Construction Work in Progress (CWIP) for Rate-Making Purposes. Chapter 62 of the General Statutes is amended by adding a new section, G.S. 62-133.2 (HB 1594). This new section provides that the Commission shall conduct only one hearing for each electric utility within 12 months of the last general rate case for the purpose of determining whether an increment or decrement rider is required to reflect actual changes in the cost of fuel and the fuel cost component of purchased power over or under base rates established in the last preceding general rate case. The amended law also provides that the Commission shall allow only that portion, if any, of a requested fuel adjustment that is based on adjusted and reasonable fuel expenses prudently incurred under efficient management and economic operations. Before enactment of this amendment, there were fuel costs adjustment proceedings three times a year; and the Commission had been barred by court decisions from reducing fuel charges because of inefficient management of poor plant performance. The old fuel adjustment procedure in G.S. 62-134(e) is repealed.

CWIP changes for rate-making purposes were implemented by the legislature by changing words in the second sentence of G.S. 62-133(b) (1) from "shall be included" to "may be included, to the extent the Commission considers such inclusion in the public interest and necessary to the financial stability of the utility in question."

Prior to this change (since July 1, 1979) in the wording of G.S. 62-133(b) (1), the Commission had been required to include in the rate base for rate-making purposes the reasonable original cost of CWIP which had the effect of allowing the utilities to recover through rates the costs of obtaining money to build new facilities. The new law gives the Commission discretionary authority on whether to include CWIP costs in rates. The new law was effective June 17, 1982, the date of ratification.

1983—Major Legislation Affecting the Regulation of Utilities

Amendments to Appeal Procedures

Chapter 526, House Bill 493 is an act to implement the Constitutional amendment regarding appeal of Utility Commission orders. G.S. 7A-29 is amended to show appeals in a general rate case from decisions

of the Utilities Commission, now go directly to the Supreme Court. In the past, according to G.S. 7A-29, the appeal shall lie to the Court of Appeals.

Chapter 572, House Bill 513, is an act to clarify the filing of a notice of appeal in all appeals taken from decisions of the Utilities Commission. G.S. 62-90(a) is rewritten to include that any party to a proceeding before the Commission may appeal any final decision of the Commission within 30 days, if they file with the Commission a notice of appeal and set forth the grounds which they believe to be unjust or unreasonable. All other parties may give notice of cross appeal, if they explain the grounds which they believe to be unjust or unreasonable, within 20 days after the first notice of appeal.

Compensation for Outside Counsel—Certain Natural Gas Litigation

Sec. 132. Compensation for outside legal fees in excess of twenty-five thousand dollars (25,000) per year incurred by the North Carolina Utilities Commission on behalf of the using and consuming public in conjunction with natural gas litigation brought before federal courts and agencies shall be paid from refunds received from the Transcontinental Gas Pipeline Company rather than from the Contingency and Emergency Fund, provided that the agreement must be approved by the State Budget Office.

Transfer of Motor Carrier Safety Regulation to DMV

Sec. 137. The safety regulation of all motor carrier transportation services is transferred from the Utilities Commission, Department of Commerce, to the Division of Motor Vehicles, Department of Transportation. This transfer shall be a "type I transfer" as identified in G.S. 143A-6. The regulation of rates and market entry for motor carrier transportation services shall remain vested in the Utilities Commission. The agencies of State government affected by this transfer shall report to the 1984 Session of the General Assembly about any changes in the General Statutes required by this transfer.

1984—Major Legislation Affecting the Regulation of Utilities

Utility Federal Tax Refund

Chapter 1097, House Bill 1513, is an act to change the state tax structure for commodities and services provided by certain utilities. This act will enable individuals to deduct the taxes on these commodities and services from their Federal income. This does not change rates, it simply converts about one-half the franchise tax to a sales tax so that the sales tax can be deducted from an individual's Federal income tax liability as an itemized deduction. It is the policy of this State that as many State taxes as possible be structured so that they are deductible for Federal income tax purposes under the Internal Revenue Code. This bill was ratified July 6, 1984, and was made effective on January 1, 1985.

FIGURE NO. 1-3

NORTH CAROLINA UTILITIES COMMISSION
Receipts and Expenditures
Fiscal Year Ended June 30, 1984¹

Source	Commission Staff	Public Staff	Total Miscellaneous
General Fund Appropriation	\$ 1,571,065.55	\$ 2,457,526.87	\$ 4,028,592.42

Data Processing Equipment	85,752.18	9,325.05	95,077.23
Other Expenses	13,633.09	2,378.94	16,012.03
	<u>\$ 2,363,245.45</u>	<u>\$ 2,627,877.57</u>	<u>\$ 4,991,123.02</u>
Number of Funded Positions	57 ²	80	137

¹ The 1977 N.C. General Assembly amended General Statute 62 to provide for a Public Staff in the Utilities Commission to represent the using and consuming public. Effective July 1, 1977, the Commission was completely restructured into two staffs, creating a budget for each staff.

² As of September 1, 1983, twenty-five (25) positions were transferred to the Department of Transportation, Division of Motor Vehicles to continue to administer the registration and insurance functions relating to the regulated motor passenger and motor freight carriers of North Carolina.

II. Selected Commission Activities January 1984 through March 1985

A. GENERAL

1. Public Involvement

The Commission has continued its emphasis on improving its public image by making its activities open for participation by the public and other interested parties. The table below shows the number of formal hearings held in Raleigh and in the service areas of the utilities involved; many of these hearings were held at night.

	Fiscal Years Ended June 30th						
	1978	1979	1980	1981	1982	1983	1984
Total Formal Hearings Held	225	269	211	271	186	227	176
Number of Hearings Held Away From Raleigh in Utility Service Areas	42	63	72	58	72	71	64
Percent of Total Hearings Held Away from Raleigh	19%	23%	34%	21%	38%	31%	36%

The primary reason for holding hearings in the service areas of the utilities involved in the hearings is to make it easier for the local consumers and general public to attend and to offer testimony if they so choose. Attendance at such hearings provides a broader knowledge of the scope and complexities of issues with which the Commission, the Public Staff, and all other participants must deal.

Advance public notice is given for all hearings of general interest and especially rate case hearings. Also, news releases are made of important Commission decisions and activities. All Commission weekly conferences (Monday mornings generally) are open to the public as a spectator or participant.

B. ELECTRIC

1. Load Forecast — N.C. Electricity Needs (1985-1994)

The General Statutes of North Carolina require that the Commission develop an analysis of the long-range needs for expansion of facilities for the generation of electricity in North Carolina. (G.S. 62-110.1). On December 1, 1983, the Commission issued its order adopting updated forecasts and plans for meeting long-range needs for electric facilities in North Carolina—1982/1983 in Docket No. E-100, Sub 46. The Order contained the most recent findings and conclusions of the Commission regarding generating capacity expansion by electric utilities serving North Carolina.

On July 17, 1984, the Commission issued an Order scheduling further hearings in Docket No. E-100, Sub 50, for the purpose of considering further updates to the various load forecasts and capacity expansion plans. The hearings were scheduled for early spring 1985, but subsequently, several parties to the proceeding requested that the hearings be postponed until late summer or early fall 1985. The Commission concluded that the

next load forecast hearings could be delayed until the spring of 1986, in view of the fact that there has been no dramatic change in the rate of growth in demand for electricity since the adoption of the Commission's last forecast in Docket No. E-100, Sub 46. Following are some load forecasts based on the most current annual reports filed by the electric companies:

Company	% Annual Growth Rates in Peak Demand During 1985-1994
CP&L	2.0%-3.0%
Duke	1.7%-2.4%
Veeco	1.5%-2.5%

The current load forecasts adopted by the Commission are based in large part on the premise that conservation, load management, and emerging alternative resources represent permanent changes in the approach of society toward the use of energy. Uncertainties concerning when the various known energy alternatives will become available in sufficient quantity to be of significant impact during the current planning horizon places the Commission in the position of having to evaluate "most likely" forecasts, while at the same time working to encourage energy alternatives which could change those "most likely" forecasts. Thus, the Commission finds it necessary to allow for a great deal of flexibility in the planning for generation capacity expansion.

2. The Alternative Energy Corporation

CREATION AND STRUCTURE

The State of North Carolina responded to its own particular energy challenge by establishing the North Carolina Alternative Energy Corporation (AEC) to identify, adapt, and promote alternative energy technologies and systems suited to North Carolina requirements. The AEC was established by the North Carolina Utilities Commission in 1980 after a series of public hearings that explored the state's energy situation. The Commission concluded that a statewide organization was needed to concentrate on solving electricity-related energy problems. The Commission structured the AEC as a quasi-public, non-profit, private corporation and secured financial support for the Corporation from both the regulated and nonregulated electric suppliers in North Carolina.

The AEC is specifically charged with (1) finding and implementing alternative energy systems which can moderate the growth of electric demand in North Carolina and (2) working to shift peak demands for electric power in a cost-effective manner. To accomplish this the AEC is actively working on both electrical demand reduction systems, alternative energy supply systems, and especially seeking new and better methods of conserving energy.

AEC efforts are divided into industry, buildings, utilities, communities, and agriculture programs. During 1984 the AEC has encouraged industry to select cost-effective cogeneration sys-

tems for supplying both steam and electricity through the use of validated computer models, on-site demonstrations, and plant tours. The AEC has encouraged farmers to use electric load management control techniques on tobacco curing barns and to improve the energy efficiency of the livestock production process. More than half of North Carolina's electricity consumption is in the residential/commercial sector. AEC work in 1984 includes careful testing and data collection from heat pumps and solar collectors, refining computer models that compare the performance and cost of energy technologies used in commercial and residential buildings, and persuading homebuilders of the market advantages of energy-efficient homes. The AEC established the nation's first statewide Energy Conservation Fund to assist nonprofit organizations to have their facilities audited, to work with their staff and management to understand the value of the energy efficiency measure proposed, to help arrange attractive financing, and to ensure that final results lead to worthwhile savings. By the middle of 1984, 130 buildings at 51 sites had been audited with 24 nonprofit organizations implementing energy efficiency measures.

The AEC is governed by a Board of Directors composed of both public and utility representatives. The six utility organizations which provide funding for the AEC each appoint a director. These directors represent the state's investor-owned generation/transmission/distribution utilities (Carolina Power & Light Co., Duke Power Co., Nantahala Power and Light Co., and Virginia Electric & Power Co.), the association of electric cooperatives (North Carolina Electric Membership Corporation), and the association of municipal electric systems (ElectriCities).

The Governor of North Carolina appoints the remaining seven directors, one of whom must be the Chairman of the Board. This framework brings individuals representing widely different interests and perspectives together to work toward the common goals of maximum energy efficiency and minimum energy costs.

The six utility organizations contribute to the AEC in proportion to their kilowatt-hour sales. The AEC operates with an annual budget of approximately \$2.3 million which is further supplemented by funds from outside sources where jointly funded projects are attractive.

The AEC structure combines the flexibility and quick response of a private corporation with the public accountability inherent in a quasi-public organization. As such it encourages high levels of cooperation among all major producers of energy within North Carolina. Corporate flexibility allows projects to be implemented that precisely address important issues in order to accelerate widespread application of alternative energy technologies and techniques.

3. CWIP—Mandatory Inclusion in Rate Base Rescinded by the Legislature

On June 17, 1982, in a called short session, the North Carolina General Assembly enacted into law language changes in G.S. 62-133(b) (1) that had the effect of rescinding the mandatory inclusion in the rate base of Construction Work in Progress (CWIP) for rate-making purposes. The change in the statute from "shall be included" to "may be included" gives the Commission discretionary powers on this matter. The mandatory inclusion had been in effect since July 1, 1979, and had provided millions of additional dollars for the utilities. Because of the large construction programs, additional revenues required to support the allowed rate of return on the CWIP portion of investment in the most recent general rate cases amounted to approximately \$165 million for CP&L, none for Duke, and \$4 million for Vepco. The real impact of this change in the treatment of CWIP on the consumers and on the ability to raise capital by the utilities depends to a large degree on the extent to which the Commission continues to allow all or a portion of CWIP in the rate-making process.

C. Consumer Pocketbook Issues

1. General Rate Case Decisions 1970-1984

A summary of the Commission decisions in general rate cases for the 15-year period from 1970 through December 1984 for the electric, gas, and telephone groups show that 59.3% of the amount requested has been granted. Broken down by groups the amounts granted were electric—61.5%; gas—62.2%; and telephone— 53.3%. (See Figure No. 2-1 for yearly totals.)

During the most current four-year period of 1981 through December 1984, the percentage granted for each group was less than for the previous 11 years of 1970 through December 1980; but the amount requested was about 50% greater than that requested during the entire previous 11 years. The amount granted during the most current four years was about 18% more than was granted during the previous 11-year period, although the gas group when taken alone was granted slightly less than for the previous 11 years. The following table shows the progression of amounts requested and granted during the last four years compared to the amounts requested and granted during the period from 1970 through 1980.

Period	Group	Requested (000s)	Granted (000s)	% Granted
1970-1980	Electric	\$1,004,343	\$ 731,261	72.8
	Gas	54,512	36,633	67.2
	Telephone	323,740	173,099	53.5
		<u>\$1,382,595</u>	<u>\$ 940,993</u>	68.1
1981-1984	Electric	\$1,424,611	\$ 761,856	53.5
	Gas	56,231	32,282	57.4
	Telephone	588,287	313,225	53.2

Many factors such as interest rates, quality of service, cost of fuel, availability of gas supplies, future demands for utility service, and utility managerial efficiency contribute to the final decisions reached by Commissioners in general rate case decisions. All of these factors are thoroughly investigated and evaluated by the Public Staff of the Commission for each rate case and then presented to the Commission for consideration as to treatment in the case. Some facts, however, lie beyond the control of the Commission and can account for even larger increases than the rate cases themselves. Cost of gas to the gas companies from the State's only supplier, Transcontinental Gas Pipeline Corporation (TRANSCO) requires an adjustment to consumers' gas rates, but this type of adjustment is made through a staff conference rather than through a general rate case. Fuel consumed for the generation of electricity was adjusted at intervals through regular open conference until June 17, 1982, when the procedure was changed to include fuel cost adjustments in general rate cases or through a formal hearing within 12 months of the last general rate case. For both gas companies and electric companies, the price, or cost adjustment to the ultimate consumer, is not necessarily the result of just general rate cases and, in fact, these cost adjustments can have as much or an even greater effect on the cost of services to the ultimate consumer than any other aspect of the industry.

2. N.C. Utility Rates v. Consumer Price Index (CPI)

Increasing utility rates during the past two years (1983 and 1984) moderated when compared to the previous eight years (1975-1982) and the overall cost of living measured by the consumer price index (CPI). The increase in electric rates substantially exceeded the CPI from 1983 to 1984. The main reason for the continuing high rate of increase in electric rates is the high level of expenditures required for the completion of generating facilities (mostly nuclear) which are estimated to be required to meet future projected growth in demand for energy. These expenditures become a part of the growing rate base

investment and require increased revenues to produce a reasonable rate of return.

Gas rates changed negligibly from one year ago which provided a welcome relief for gas customers who for the previous eight years experienced an average annual 22.6 percent increase in rates or a 128.1 percent increase greater than the increase in CPI for the eight-year period. The gas supply did a turnaround during 1983 from a shortage to an abundance as the result of many factors such as alternative fuels at competitive prices and new gas supplies being discovered. Currently, the gas supply is such that the distribution companies do not expect a "fly up" in natural gas prices even though additional categories of gas became deregulated on January 1, 1985.

The combined business and residential average monthly telephone bill for local service decreased by 3.87% or from \$26.07 to \$25.06 from 1983 to 1984 due largely to telephone customers exercising their option to buy their telephone instruments rather than to continue leasing the instruments from their telephone company.

The actual reduction in local service bills may not be immediately apparent to telephone customers who exercised the option because the initial cost of the equipment must be absorbed before savings can be realized. The telephone company on the other hand realized an immediate reduction in local service revenues from leased equipment because of the purchase.

The following table shows the electric, gas, and telephone utility costs compared to the CPI for the years of 1975 through 1982 and 1983 to 1984.

Year Ended December 31	Average Residential Electric Rates Per kWh	Average Residential Gas Rates Per Dekatherm (\$)	Average Monthly Telephone Bill For Local Service (All Customers) (\$)	Consumer Price Index All Urban Consumers
1975	3.09¢	\$1.99	\$14.88	161.2
1980	4.29¢	\$4.08	\$20.03	246.8
1982	5.82¢	\$5.59	\$24.79	289.1
1975-82 % Change	88.3%	180.9%	66.6%	79.3%
1983	6.11¢	\$6.50	\$26.07	298.4
1984	6.62¢	\$6.51	\$25.06	311.1
1983-84 % Change	8.3%	.2%	(3.87%)	4.3%

*Adjusted for telephone equipment lease income transferred to AT&T Information Systems from Southern Bell (approximately \$119,000,000 for 1984)

**III. Summary Of The
Commission Activities And
Operations — 1982-1983
And Prior Years**

A. NUMBER OF COMPANIES REGULATED

At December 31, 1983, there were 1,366 companies regulated by the North Carolina Utilities Commission as compared with 1,281 in 1982. In addition 80 municipal utility systems, while not regulated by the Commission, were required to file annual reports, making a grand total of 1,446 utilities regulated or required to file annual reports as of December 31, 1983. Many changes take place annually in various utility groups since new companies are being certified and others are being deleted because of sales, mergers, and abandonments. See Figure No. 3-2.

B. COMMISSION CASE LOAD: FORMAL AND INFORMAL HEARINGS

In addition to the multiplicity of decisions made informally by the Commission in conferences with its staff and interested parties, the Commission maintains a full docket of formal and semiformal hearings and conferences. There are many small complaints and inquiries disposed of daily by individual Commissioners and individual staff heads (both Commission and Public Staff). These complaints are handled through discussions with utility customers, executives, representatives, organizations, and associations.

During 1983 there were 814 proceedings acted upon, as compared to 2009 in 1982. Included in the 1982 figure are 1,113 orders issued by wire service. The issuance of these type orders was transferred to the Department of Motor Vehicles (DMV) in September 1983. There were 227 formal hearings and 559 informal hearings in 1983. See Figure No. 3-3 for 1983 number of proceedings by type of utility.

The proceedings require much time and effort by personnel of both the Commission and Public Staffs and more time in actual public hearings. The number of pages transcribed by the court reporters over previous years are as follows:

Year	No. of Pages Transcribed
1975	27,938
1976	23,942
1977	30,056
1978	34,057
1979	28,442
1980	28,829
1981	34,205
1982	25,447
1983	28,191

The general rate increase hearings continued to generate much public interest in 1983. The Attorney General represented some segments of the public sector who wished to intervene while others provided their own legal counsel. In addition the Commission's Public Staff intervened in most cases and made their recommendations to the Commissioners. The Public Staff was created by the 1977 Legislature as an independent advocate charged with the responsibility of representing the using and consuming public in matters heard by the Commission.

Both the Commission and the Public Staff's participation in the formal general rate cases continued to increase as the case load increased and many aspects of ratemaking became more technical.

As shown in Figure No. 3-3 many docketed issues are settled by letter type orders and rulings. These are largely matters in which no one has intervened or no general public interest has been demonstrated, as in the case of many gas, electric, telephone, and transportation tariff filings. These types of proceedings accounted for 68.7% of the total proceedings before the Commission in 1983. Generally they require only about 10% to 20% of the time of the Commission's staff and the Commissioners.

Complaint Activity

Another important facet of the Commission and Public Staff workload involves the handling of customer complaints dealing with all aspects of utility operations and services. A vast majority of these complaints are settled without becoming a docketed item and going into informal hearing proceedings. The Public Staff's Consumer Services Division investigated and resolved a majority of these complaints. To illustrate the magnitude of this phase of the Commission workload, the number of complaints received and handled in 1983 was 5,243, compared to 4,942 in 1982, and 5,578 in 1981.

C. GENERAL IMPACT OF THE REGULATED UTILITIES ON THE ECONOMY OF NORTH CAROLINA IN 1983

The regulated utility companies made significant contributions to the economy of the State during 1983. There were 1,446 companies in 1983 compared to 1,361 in 1982. Figure Nos. 3-4, 3-5, and 3-6 portray the magnitude of the contributions in chart and table form. In 1983 employment by the utilities showed an increase of 2.3% from the previous year. Salaries and wages paid to the utility employees continued to increase in dollar amount from more than \$1,979 billion in 1982 to \$2,124 billion in 1983, a 7.3% increase.

State income, franchise, and property taxes paid by the regulated sector of the State's business community continued to be substantial.

Type Taxes	Utilities Percent of State Totals	
	1982	1983
State Income Taxes (Corporations only)	21.8	22.7
State Franchise Taxes	87.4	87.8
Bus and Truck Fees	22.0	24.1
Local Property Taxes	7.0	6.4
Total of Above Taxes	24.3	23.5

Concurrent with the continuing increase in wages and taxes paid by the regulated utilities, gross operating revenues continued to increase. Figure No. 3-6 depicts this growth with the four Class A electric companies showing an increase of 7.7% in 1983 compared to 1982.

Investment in gross plant allocated to North Carolina by the electric, gas, and telephone utility companies continued to increase over previous years. There was a 2.9% increase in the 1983 total gross plant allocated to North Carolina compared to the previous year, making a total of more than \$15 billion as of December 31, 1983 (\$15,219,765,000). The increased electric plant investment will serve the increasing number of electric and gas customers which numbered 2,163,258 in 1983 compared to 2,107,632 in 1982. In 1983 there were 2,447,116 telephone access lines reported compared to 2,391,651 in 1982. The telephone industry changed its system of reporting the number of telephones served by each company to the number of access lines. (P-100, Sub 58). As a result of the 2.3% increase in access

lines, more funds will be required to provide adequate service to these additional access lines. The use of the term "access" lines instead of "main" lines and the change in method of counting these lines results primarily from the divestiture of American Telephone and Telegraph Company of its operating companies.

The regulated motor freight, motor passenger, and railroad industries play an important role in the industry of North Carolina. However, due to accounting classification changes allowed by the ICC in 1979, and the changes in reporting of information by carriers, less information was available than has been in the past. For detailed information please refer to the individual sections in this publication.

A. GENERAL COMMENTS

There were four Class A electric utilities operating in North Carolina under the regulation of the North Carolina Utilities Commission at December 31, 1983. To qualify as a Class A company, there must be at least \$2,500,000 annual gross operating revenues. There are three small electric utilities also in operation in North Carolina: Laurel Hill Electric Company, a privately owned company located in Scotland County which served 665 customers in 1983; New River Light and Power Company, a subsidiary of Appalachian State University (ASU) located in Boone, North Carolina, which served 4,967 customers in 1983 with ASU being its largest single customer; and Western Carolina University

located in Jackson County, North Carolina, which is not required to file an annual report with the North Carolina Utilities Commission. The four major electric companies provide service directly to retail consumers, and they are suppliers of electric energy on a wholesale basis to the twenty-eight electric membership corporations (EMCs) operating in North Carolina. There are five EMCs with operations in North Carolina whose headquarters are in other states. The Class A companies also supply electric energy to the seventy-one municipalities operating electric distribution systems throughout the state. The North Carolina Utilities Commission does not regulate the retail rates and service of the EMCs or the municipalities operating in North Carolina.

The four major electric utilities are investor-owned companies, three of which have large service areas in adjacent states. Duke Power Company (Duke) serves the west-central portion of North Carolina and an adjoining area in South Carolina. North Carolina retail customers account for approximately 57.3% of Duke's total sales. Carolina Power and Light (CP&L) serves areas in the east-central, south-central, and western parts of North Carolina as well as an adjacent area in the eastern part of South Carolina. The retail customers in North Carolina account for 68.6% of CP&L's total sales. Virginia Electric and Power Company (Vepco) serves the northeastern corner of North Carolina and most of Virginia. Only 4.3% of Vepco's total sales are to North Carolina retail customers. Nantahala Power and Light Company (Nantahala) serves the far western portion of North Carolina and is the only Class A company operating solely within North Carolina. Although it qualifies as a Class A utility, its service area and number of customers are small compared to the other three Class A companies. Aluminum Company of America (Alcoa) owns all of the capital stock of Nantahala. Portions of Nantahala's electric generation were formerly utilized by Alcoa for the smelting of aluminum. Nantahala, in conjunction with Tapoco, Inc. (another small electric generating company), sells virtually all of its electric generation to the Tennessee Valley Authority (TVA). TVA, in turn, returns entitlements of electricity back to Nantahala and Tapoco. Nantahala and Tapoco further apportion the entitled power between themselves; Nantahala for its North Carolina customers and Tapoco for its only customer, Alcoa, located in Tennessee.

B. CUSTOMER GROWTH—COMMENTS

In 1983 the four major electric utilities experienced a customer growth rate of 2.5% for their North Carolina operations. The net customer increase was 43,192 bringing the total average number of customers to 1,779,104 at December 31, 1983.

The smaller electric utilities experienced a 6.3% increase in their number of customers. Total customers increased from 5,431 to 5,771 during 1983. An average of 1,784,875 North Carolina customers were served by all the regulated electric utilities during 1983. See Figure No. 4-7.

C. ANNUAL CUSTOMER USAGE

The annual customer usage of kilowatt-hours per residential customer in 1983 was 11,873 kWh. This is a 1.9% increase from 1982. The 1983 figure is 43.4% higher than the national average of 8,277 kWh per residential customer. A study of residential electric customers for North Carolina cities with a population of 50,000 or more for the period 1960-1983 reveals that these customers used a far greater number of kilowatt hours annually per customer than customers in cities of similar

size throughout the United States. North Carolina's per customer residential consumption exceeds the national average for the same period. Figure No. 4-5 is a table reflecting the results of this usage study.

The average monthly use of electricity (989 kWh) in 1983 by North Carolina residential customers of Class A companies is one of the highest in the nation. These customers constitute about 86.1% of the total electric utility customers in the state. There is a direct correlation between the greater residential usage in North Carolina and the average charge per kilowatt-hour. Generally the lower the cost per kWh the greater the usage.

D. RATE INCREASES APPROVED

The average charge per kilowatt-hour for North Carolina residential service increased 5.0% in 1983 from the preceding year. Figure No. 4-8 shows the average price of one kWh for the years 1960, 1965, 1970, 1975, 1980, 1982, and 1983. The 1983 figure of 6.11¢ reflects the general rate increases approved by the Commission as indicated in Figure No. 4-6.

E. COMPARISONS OF AVERAGE RESIDENTIAL MONTHLY BILLS

In Figure No. 4-9 a typical residential electric bill as of January 1, 1983, from North Carolina is compared to nine selected states from across the country. These states include Alabama, California, Florida, Indiana, Maine, Michigan, Ohio, South Carolina, and Virginia. North Carolina is the second lowest at the 500 kWh and 750 kWh consumption levels, and third lowest at the 1,000 kWh consumption level.

In a comparison with the United States average, North Carolina monthly bills for 1983 continue to be lower. Data shown in Figure No. 4-9 indicates that states in all regions of the United States have experienced increasing electric bills. The North Carolina electric utilities have companywide rates for the respective residential, commercial, and industrial classes of customers. When company, usage, and load characteristics are the same, the residential customer's bill will not vary between the small and large communities.

F. GENERATING CAPACITY—TOTAL AND WITHIN NORTH CAROLINA—NUCLEAR POWER IMPACT

Total owned and purchased generating capacity of the Class A electric companies serving North Carolina for 1983 was 34,562,000 kilowatts. Generating capacity located within the boundaries of North Carolina accounted for 52.3% of total kilowatt capacity owned and purchased during 1983. See Figure No. 4-10.

Electric utilities are building for an increasingly larger percentage of their total generating capacity to come from nuclear power. The first

nuclear fueled electric generating station in North Carolina was CP&L's Brunswick Nuclear Plant located in Southport. It began commercial operation in 1975. A second unit has been added to the Brunswick Station as well as the operation of the Shearon Harris Unit 1 in New Hill and the Robinson Unit 2 in Hartsville, South Carolina. In December 1983 the Board of Directors of CP&L approved the cancellation of the Harris Unit 2. The project was about 4% complete and no major expenditures had been made during 1983. There were several reasons for the cancellation. In addition to a reduced rate of growth in demand for electricity, a primary reason was the substantial increase in costs due to continually changing and expanded federal regulatory requirements.

The Duke Power Company Board of Directors cancelled Unit 1 of the Cherokee Nuclear Station located in Cherokee County in South Carolina on April 29, 1983, after revised load forecasts indicated additional baseload capacity would not be needed until 1995. Completion in that time frame would have raised the cost of the unit to more than \$6 billion. Cherokee Units 2 and 3 were cancelled by the Board in November 1982 because of reduced growth forecasts.

Duke Power received a full-power operating license for Unit 2 of the McGuire Nuclear Station located on Cowans Ford Dam at Lake Norman in May 1983. The 1,180,000 kilowatt unit underwent extensive testing during the remainder of the year and generated 2.5 billion kilowatt-hours of electricity. It is scheduled for commercial operation in early 1984.

Work on Unit 1 of the Catawba Nuclear Station in York County in South Carolina neared completion at year end. Fuel is expected to be loaded in the spring of 1984, with commercial operation scheduled for 1985. Catawba Unit 2 is 65% complete and slated for commercial operation in 1987.

Vepco's four nuclear units had an average capacity factor of 65% which is better than the national average for the last few years. The capacity factor [actual generation vs. theoretical (i.e. generation 100% of the time)] for North Anna Unit 1 located in Mineral, Virginia, was 70% and 74% for Unit 2. Surry Unit 1 located in Gravel Neck, Virginia, had a 52% capacity factor and Unit 2 achieved 60%. North Anna Unit 2 set a new Vepco record by operating for 144 days straight. These four units also set a Vepco record for generation in 1983, supplying more than 18.7 billion kilowatt-hours of electric power. Vepco, which began commercial nuclear operations in 1972, is now the nation's second largest investor-owned supplier of nuclear-generated electricity.

After years of negotiations, the sale of a portion of North Anna Nuclear Power Station to Old Dominion Electric Cooperative was closed at the end of 1983. In return for an 11.6% ownership interest in North Anna, Old Dominion agreed to pay Vepco \$250 million. Vepco received \$197 million at closing, with the rest to be paid over the next 13 years.

During 1983 nuclear generation accounted for the following percentages of total kWhs generated for each of the companies regulated by the Commission: CP&L—28.0%, Duke—28.2%, and Vepco—33.2%.

Cogeneration

In 1978 the Federal Public Utility Regulatory Policies Act (PURPA) challenged the Federal Energy Regulatory Commission and the State regulatory authorities to encourage the development of cogeneration and small power production. Cogeneration facilities simultaneously produce two forms of useful energy such as electric power and steam. Cogeneration facilities use significantly less fuel to produce electricity and steam (or other forms of energy) than would be needed to produce the two separately. Thus by using fuels more efficiently, cogeneration facilities can make a significant contribution to the nation's effort to conserve its energy resources. CP&L, Duke, and Vepco, in cooperation with the N. C. Alternative Energy Corporation (AEC), are working with customers who may be able to generate some of their own needs for electrical power, thus lowering peak loads. Small power production facilities use biomass, waste, or renewable resources, including wind, solar, and water, to produce electric power. Reliance on these resources for energy can reduce the need to consume traditional fossil fuels to generate electric power.

The Commission's order, (E-100, Subs 41 and 41-A), dated June 3, 1980, enumerated as part of its responsibilities the determination of the rates, charges, and conditions for the sale of electric energy and electric capacity between electric utilities and qualifying cogenerators or small power producers in North Carolina. In addition the Commission will determine the relative responsibilities of utilities and qualifying facilities with respect to system protection, service reliability, and other matters affecting such service.

Major participants in the cogeneration program will come from the textile, paper, and chemical industries. Through efficient generation of their own electricity, a greater profitability and aid in the reduction of overall production costs will be stimulated. The two largest power companies have access to a potential of 258,320 kW of electricity through the promotion of cogeneration since the Public Utility Regulatory Policies Act of 1978. These cogeneration facilities will have the capacity to provide the electrical needs of approximately 29,468 residential homes. Vepco has no customer-owned hydroelectric facilities operational in its North Carolina service area, but it is purchasing power from two facilities in its Virginia service area.

G. SOURCE AND DISPOSITION OF THE ELECTRIC OPERATING REVENUE DOLLAR

Both the source and disposition of the 1983 electric operating revenue dollar are shown by

the pie charts on Figure No. 4-12. Fuel costs, the largest component of the operation and maintenance expenses, consumed the larger portion of the operating revenue dollar. In 1983 fuel costs required 29 cents while the remaining operation and maintenance costs required only 24 cents. Shown in Figure No. 4-11 is comparative data reflecting the components percentagewise for both the source and disposition of the electric operating revenue dollar for 1983. Fuel costs as a percent of total operation and maintenance expenses (excludes depreciation and taxes) have been declining since 1974, primarily because of the decrease in coal costs and the increasing use of nuclear fuel. The chart in Figure No. 4-13 shows this relationship for the period 1978-1983.

H. ENERGY SALES

Energy sales for the past decade have been rising. Class A companies' total energy sales in North Carolina increased in 1983 over 1982 by 3.1% with 66 billion kilowatt hours sold. The recent recessionary economic conditions coupled with the customers' conservation efforts explain the downward direction of energy sales in 1982 compared to the previous years. Figure No. 4-14 shows energy sales by class of customer for the

years 1960, 1965, 1970, 1975, 1980, 1982, and 1983.

I. STATISTICAL SUMMARY DATA

As shown in Figure No. 4-15 the total operating revenues for North Carolina operations of the Class A electric utilities increased 7.7% for 1983 as compared to 1982.

North Carolina operating expenses for the Class A companies increased 7.4% in 1983 over 1982, and the net operating income for 1983 increased 9.1% from the previous year.

Total company net income available from the common shareholders of the Class A companies was \$828,837,000 for 1983 vs. \$741,414,000 for 1982. The number of common shares outstanding at year end increased from 274,340 million in 1982 to 285,906 million in 1983. This resulted in an increase in earnings per share (year-end shares outstanding) from \$2.70 in 1982 to \$2.90 in 1983.

Total salaries and wages paid North Carolina employees by Class A companies for 1983 was \$540,935,000, an increase of 10.2% over 1982. In 1983 the number of employees residing in North Carolina was 20,765 compared with 20,484 in 1982, an increase of 1.4%.

THE NATURAL GAS INDUSTRY

A. A BRIEF HISTORY OF THE
NATURAL GAS INDUSTRY

During 1983 four Class A utility companies were under the regulation of the North Carolina Utilities Commission: North Carolina Natural Gas Corp., North Carolina Gas Service—Division of Pennsylvania and Southern Gas Co., Piedmont Natural Gas Company, Inc., and Public Service Company of N.C. Class A utilities have annual gas operating revenues of \$2,500,000 or more. Figure No. 5-2 is a list of the companies and their chief officers.

The North Carolina companies are primarily distribution companies purchasing their gas for resale mainly from Transcontinental Gas Pipe-

line Corporation (TRANSCO). TRANSCO is the only interstate gas pipeline operating within the State. Transco purchases natural gas from producers in Texas and Louisiana and transports it to North Carolina where it is resold to the distributing companies. The selling rates are prescribed by the Federal Energy Regulatory Commission on the basis of three rate zones based on distance from the point of production. North Carolina is in zone 2 which is bound by the Georgia-South Carolina state line on the south and the Virginia-Maryland state line on the north.

The gas supplies available to North Carolina's companies are based on the amount of gas Transco has available. In 1978 the Federal government

enacted the Natural Gas Policy Act. This act encouraged more producers to drill for new natural gas. The increased price of gas made it economically feasible to bring "deep" gas out of the ground. This brought a more abundant supply of gas to the marketplace. During this same period the price of oil decreased and more customers chose to burn oil instead of natural gas. These are some of the reasons why there is a plentiful supply of natural gas into North Carolina currently.

Only two of the distributing companies in North Carolina have operations in other states: North Carolina Gas Service, a division of Pennsylvania and Southern Gas Company and Piedmont Natural Gas Company. North Carolina Gas Service also operates in Pennsylvania, New York, and Maryland; and Piedmont Natural Gas operates in South Carolina as well as North Carolina. Under existing Federal Law any intrastate operation of distributing companies whose purchases and sales are all made within the State are under the jurisdiction of the State; i.e., the North Carolina Utilities Commission.

During 1978 all the gas companies changed their methodology by which purchases of gas were made from a thousand cubic feet (Mcf) basis to a dekatherm (dt) basis. The heat content of one Mcf of gas is equal to approximately 1.030 dekatherms. One dekatherm equals 10 therms. One therm equals 100,000 Btu's (British thermal units).

B. PLANT INVESTMENT AND EXPANSION

There are more than 200 North Carolina cities and towns which have a combined population in excess of 4,500,000 served by the natural gas utilities. The natural gas companies continued limited expansion of services by investing more than \$90 million in plant facilities for the year 1983. At December 31, 1983, their combined total gross investment for the State was \$488,378,000. This represents an increase of 7.8% from the preceding year. Figure No. 5-3 gives the gross plant investment for the natural gas companies for the period 1963-1983.

C. GROWTH TRENDS—CUSTOMERS, REVENUES, VOLUME

In 1983 the annual average number of natural gas utility customers increased 3.3% from the previous year. Figure No. 5-4 shows the customers by classification for the years 1963-1983. The natural gas industry is reasonably young and comparatively small in North Carolina having been started during the early fifties. Figure No. 5-5 shows the customer growth for the years 1965, 1970, 1975, 1980, 1982, and 1983 by major customer classification.

Figure No. 5-6 shows the total customer growth by regulated companies and municipal gas systems with total revenues of gas sold in Mcf's or dekatherms for the years 1965, 1970, 1975, 1980,

1982, and 1983. The municipals experienced a decline in the number of customers equal to 3.2% in 1983, while the regulated utilities grew at a 3.3% rate.

Growth in revenues from the sale of gas in 1983 for the regulated section was 9.0%, and for the municipals the rate was 7.1%. The quantity of gas sold in terms of dekatherms in 1983 decreased by 4.3% for the regulated section and decreased by 8.8% for the municipals.

Figure No. 5-7 shows the sale pattern of natural gas to ultimate type of customers in million dekatherms by the North Carolina regulated natural gas companies for the period 1965-1983.

D. COMPARISONS OF RESIDENTIAL BILLS, USAGE, AND COST PER MCF OR DEKATHERM

Rates for natural gas and its usage vary widely among companies and regions rendering it extremely difficult to make meaningful comparisons. Some of the reasons for these variances are price, usage, and saturation of customers. Price is determined by the distance from the source of supply, the dates the pipelines were constructed, and the investment costs to be recovered. The price is also affected by the company's system load factor ratio. A company with a high system load factor ratio (actual use of facilities compared to its full (100%) operating capacity) with all other cost items being equal could price its gas lower than a company could with a low system load factor. Usage depends upon several factors: the percent relationship of space heating customers to total customers among companies and regions, the weather conditions between companies and regions (a variance in temperature of a few degrees per day between areas can greatly affect the number of degree days), and the competitive relationship of natural gas to other energy sources such as fuel oil, electricity, and coal. Saturation of customers depends upon the number of customers per mile of gas mains.

Some average annual usages and cost data for the North Carolina natural gas companies and seven natural gas companies located in various sections of the United States are shown in Figure No. 5-8. The data indicates North Carolina customers are in the middle range of the seven companies shown. Due primarily to a generally mild climate North Carolina usage tends to be lower than the national average.

E. INDUSTRIAL SALES VOLUME

In 1983 industrial sales totaled more than 69 million dekatherms. This reflects a 7.9% decrease from the 1982 sales. Total industrial sales of dekatherms accounted for 54.3% of total natural gas sales in North Carolina by the regulated natural gas companies. See Figure No. 5-9 for a summary of natural gas sales, revenues, and customers for the years 1965, 1970, 1975, 1980, 1982, and 1983.

F. RATE CHANGES—GAS TRACKINGS

General Rate Increases. A portion of the revenue increases in 1983 reflects the general rate increases approved by the Commission for the companies listed in Figure No. 5-10.

Gas Trackings

General Pass Ons of Wholesale Price Changes. Pursuant to authority granted to the Utilities Commission in G.S. 62-133 by the 1971 General Assembly the Commission in Docket No. G-100, Sub 14, established procedures under which gas companies in North Carolina could pass on to their customers wholesale increases in the cost of gas to them by their pipeline suppliers. This tracking authority has reduced the amount and number of general rate cases filed with the Commission during the years since 1972. It has also reduced the lag time the companies would have experienced in recouping the increased gas costs which have a direct impact on the companies' level of earnings.

The gas tracking changes approved by the Commission for the calendar year 1983 are found in Figure No. 5-11.

Special Situations. These gas trackings can be both increases and decreases in the cost of wholesale gas from Transco. The distributing companies maintain a "deferred" account in which the changes in cost of gas from the filed tariff rate are accounted for, and at an appropriate time applications to recover or refund the net effect are made with the Commission.

The tracking proceedings under which these pass ons are allowed involves filing of data by gas utilities essentially in the same format as filing for general rate proceedings. This data is reviewed and analyzed by both the Commission and Public Staff's Engineering and Accounting divisions.

Gas Supply Volume Trackings. Since 1976 the Commission has granted approval for all the gas utilities to file curtailment tracking mechanisms such that the gas utilities' margin (difference in revenues and cost of gas plus gross receipts tax) was fixed in the general rate case. These mechanisms protected the gas utility from fluctuating changes in supply volumes. As the available supply of natural gas increased, the margins increased on sales to customers and permitted the customers' rates to be reduced while the companies' margin remained fixed. As volumes decreased the gas utility simply raised all customers' rates such that the margin remained constant. The mechanisms as described allowed interim adjustments to rates so the gas utility did not have to file constant general rate cases to take care of the volatile fluctuations in its supply of gas and resultant changes in margins. There were no curtailment tracking adjustments (CTA) filed in 1983. However, CTA consideration was

eliminated in general rate cases due to an adequate supply of gas.

Industrial Sales Tracker (IST). The Industrial Sales Tracker implemented for Public Service Company and N. C. Natural Gas are modified curtailment tracking mechanisms. These mechanisms collect revenues from those industrial customers who have heavy fuel oil as an alternate fuel, and refund it to the high priority market. This mechanism was proposed by the Public Staff so the gas utilities could negotiate the sale of industrial natural gas and benefit all other customers. As industrial sales increase the rates to all other customers is lowered, and by the same token, if individual natural gas sales decrease, the rate to all other customers will increase. This mechanism was begun in 1983 for the two gas utilities as mentioned earlier.

Decreases in the amount of available gas result in an increased IST rate while increases result in a decreased IST rate. Changes in the available gas from the base year volumes due to fluctuations in gas supply and sales volume will inversely affect the IST base year volumes. Then the IST rate will be adjusted accordingly.

Exploration and Development Trackings (E & D)

On June 26, 1975, the Commission established natural gas exploration rules (Docket No. G-100, Sub 22), which provided for customer participation in approved exploration and development programs. Approximately every six months the distributors determined a dekatherm rate to be billed to their customers to recover their share of the allowable E & D costs. Successful discoveries are sold, and the proceeds used to reduce exploration costs or, when practical, the new gas is put into Transco's supply of gas to North Carolina distributors to reduce curtailment gas tracking rates.

In September 1980 the N.C. Utilities Commission terminated the ratepayers participation in the E & D programs. Supplies of natural gas had begun to increase thereby warranting less supplemental supplies of natural gas. The net effect of the termination of the programs is that the expenditures decrease, and the value of recoveries increase, thus netting down the total cost to be recovered from ratepayers. The program currently is providing refunds to those customers who were being served as of September 1980. These refunds will continue as long as net revenues are being received from the sale of gas produced as result of the E & D programs. Capital expenditures for exploration ventures through September 1983 are \$85,374,596. The total net equivalent Mcf production is 24,515,965. Therefore, the finding cost per net equivalent Mcf reserves is \$3.50. Figure No. 5-12 illustrates the 1983 refunds and cumulative dollars paid to fund the E & D programs.

G. NATURAL GAS PIPELINE SAFETY

History and Overview: On August 12, 1968, the United States Congress passed Public Law 90-481, better known as the Natural Gas Pipeline Safety Act of 1968. This Act authorized the Secretary of Transportation to administer this law, develop standards, and regulate enforcement of such standards for the design, installation, inspection, testing, construction, extension, operation, replacement, and maintenance of pipeline facilities. Section 5a of this Act authorized each state to regulate these minimum standards through certification by the Secretary of Transportation providing certain provisions were met.

Section 62-50 (Safety Standards of Interstate and Intrastate Natural Gas Pipelines) was enacted as Chapter 1134 of the 1967 Session Laws and became effective January 1, 1968. In the 1969 Legislature an amendment was added to Section 62-50 of the General Statutes which authorized the North Carolina Utilities Commission to administer a state program pertaining to the design, installation, inspection, testing, construction, extension, operation, replacement, and maintenance of pipeline facilities used to transport natural gas in North Carolina.

The procedures and standards adopted by the North Carolina Utilities Commission as authorized under Section 62-50 is known as the North Carolina Gas Pipeline Safety Code. This code is a mandatory requirement under State law and noncompliance by any persons engaged in the transportation of gas or who own or operate pipeline facilities is subject to a civil penalty not to exceed \$1,000 per each violation for each day that such violation persists, except that the maximum civil penalty shall not exceed \$200,000 for any related series of violations. The law also provides authority for the Commission to file suit to restrain violations of the Code, including the restraint of transportation of gas for the operation of the pipeline facilities.

The North Carolina Gas Pipeline Safety Code is comprised of three basic sections: Part 191 (Report of Leaks), Part 192 (Minimum Federal Safety Standards), and Part 193 (Liquified Natural Gas Facilities). In order to comply with the certification of the Secretary of Transportation, the Commission must adopt as part of its Code all Minimum Federal Safety Standards.

There are four major gas utilities in North Carolina, along with eight municipal gas systems. In addition the 1979 session of the North Carolina General Assembly gave the Utilities Commission jurisdiction over master meter operations. This added 168 distribution systems to the already existing 175, bringing the total to 343 systems which must be inspected for compliance with the North Carolina Gas Pipeline Safety Code. Connecting and within these systems are 1,550 miles of transmission mains and 10,302 miles of distribution mains.

Enforcement Activity: During 1983 the Gas Pipeline Safety Section of the Commission Staff

spent 383 man days inspecting the pipeline facilities in North Carolina. Of the 199 distribution systems inspected, 104 major violations of the "Minimum Federal Safety Standards" were detected. By the end of the year, 95 of these violations had been corrected and the remaining were being worked on. There were five accidents investigated by the Staff during 1983. Two of these involved L.P. Gas and were investigated at the request of the S.B.I. in order to assist their agents. The three accidents involving natural gas resulted in injuries to three people and property loss of some \$50,400. The Staff conducted six seminars for the gas operators in North Carolina. These seminars covered the rules and regulations and how to comply with the code. The cost of conducting the pipeline safety program for 1983 was \$138,611 of which \$75,011 was refunded to the State by the U.S. Dept. of Transportation.

H. SOURCE AND DISPOSITION OF THE GAS REVENUE DOLLAR

Both the source and disposition of the 1983 gas revenue dollar are shown by the pie charts on Figure No. 5-13. Shown in Figure No. 5-14 is a comparison chart reflecting both source and disposition of the gas revenue dollar for the years 1979, 1980, 1981, 1982, and 1983.

I. STATISTICAL SUMMARY DATA

The total gross operating revenues for the Class A gas companies were more than \$700 million in 1983. This reflect a 9.1% increase from the previous year. Part of this increase is explained by the fact that Piedmont Natural Gas experienced a sizable increase in its revenues from the transportation of gas for other companies. Similarly operating expenses before taxes increased 8.6% in 1983. The fact that state and federal income taxes increased significantly in 1983 helps explain why total operating expenses increased compared to 1982. In 1983 operating expenses before taxes were 85.3% of total operating revenues compared to 85.7% in 1982. The increased nonutility operating revenues offset the larger taxes and operating expenses and therefore contributed to a larger net income than the previous year. The 1983 net income rose 32.8% from 1982. In 1983 other income increased significantly due to an unusual increase in miscellaneous nonoperating income for N.C. Natural Gas Company.

Interest on long-term debt increased 24.3% and earnings per common share outstanding increased from \$2.15 to \$2.94 in 1983. Also, the average number of common shares outstanding increased by 3.5% to 8,793,000 shares. The average number of full-time employees in 1983 totaled 2,277, an increase of 20 persons. The total wages paid these employees equaled \$43,887,000, a 5.4% increase from the previous year. See Figure No. 5-15 for additional financial and operating statistical data.

VI. The Communications Industry

Telephone, Western Union, Radio Common Carrier

A. BRIEF REVIEW OF THE TELEPHONE INDUSTRY—GENERAL

At December 31, 1983, there were sixteen Class A & B and four Class C & D telephone companies under the jurisdiction of the North Carolina Utilities Commission. Five of the telephone companies under North Carolina jurisdiction also have operations in other states. These companies include ALLTEL Carolina Telephone Company, Central Telephone Company, Continental Telephone of Virginia, General Telephone of the Southeast, and Southern Bell Telephone and Telegraph Company.

Description of the Divestiture Transaction of American Telephone & Telegraph Company (AT&T)

Background

On August 24, 1982, Judge Harold H. Greene of the U.S. District Court for the District of Columbia approved and entered a consent decree entitled the “Modification of Final Judgment” (Consent Decree), which arose out of antitrust litigation brought by the Department of Justice (DOJ), and was agreed to by AT&T and the DOJ with certain modifications which the Court has required. On February 29, 1983, the United States Supreme Court affirmed the Consent Decree. Judge Greene’s decision was based largely on the public interest doctrine of fairness.

Under the terms of the Consent Decree, AT&T had to divest itself, in accordance with the terms of the Plan, of ownership of the portions of the Bell operating companies (BOC) that relate to exchange telecommunications, exchange access functions, and printed directory advertising, as well as AT&T’s cellular advanced mobile communications service business. Cincinnati Bell, Inc., and The Southern New England Telephone Company, in which AT&T holds minority interests, are not included in the divestiture requirement. AT&T retained ownership of AT&T Communications, Western Electric, Bell Laboratories, AT&T Information Systems, AT&T International, and those portions of the BOCs which provide interexchange service and customer premises equipment. The divestiture was effective January 1, 1984, and the new parent company serving North Carolina is Southern Bell Telephone and Telegraph Company, a subsidiary of BellSouth Corporation, one of seven regional holding companies formed after divestiture and independent of AT&T and of each other. Other state service areas of Southern Bell are Florida, Georgia, and South Carolina.

Following is a list of the Telephone Holding Companies and their wholly owned or controlled operating telephone companies, which were under Commission regulation as of December 31, 1983:

Parent Holding Company	Operating Telephone Company
American Tel. & Tel. Co. (1)	Southern Bell Tel. & Tel. Co.
Centel Corporation	Central Telephone Company
Continental Tel. Co.	Cont. Tel. Co. of North Carolina Cont. Tel. Co. of Va. (Serves Knotts Island, N.C.)
Gen. Tel. & Electronics	Gen. Tel. Co. of the Southeast
Mid-Continent Tel. Co.	ALLTEL Carolina Tel. Co. Sandhill Tel. Co.
T.D.S. Incorporated (Telephone & Data Systems, Inc.)	Barnardsville Tel. Co. Service Telephone Co.
United Telecommunications, Inc.	Carolina Tel. & Tel. Co.

(1) Effective January 1, 1984, under the Divestiture Consent Decree the parent holding company for Southern Bell Telephone and Telegraph Company will be BellSouth Corporation, one of the seven (7) regional holding companies created to accomplish the required divestiture.

B. CUSTOMER GROWTH AND IMPACT ON PLANT INVESTMENT

The regulated utilities had a total of 2,447,116 access lines in service as of December 31, 1983. This was an increase of 2.3% from 1982 with 2,391,651 total access lines. Figure No. 6-3 shows total telephones by companies for the years 1960, 1965, 1970, 1975, 1980, and 1981. Figure No. 6-4 shows access lines for the years 1982 and 1983. In 1982 the telephone industry changed its system of reporting the number of telephones served by each company to the number of access lines. For a definition of access line see Figure No. 6-5. In 1983 Southern Bell Telephone and Telegraph Company continued to serve approximately 51%, and Carolina Telephone and Telegraph continued to serve 25% of the total customers in North Carolina.

The installation of additional main station telephones required additional investment. For example, in installing an additional instrument, provisions must be made for central office equipment, circuits, and lines to accommodate the traffic potential of the installation. The telephone companies attempt to maintain a plant margin of reserve for growth and maintenance for at least six to eighteen months for central office equipment. For other types of plants, the companies strive for a margin of reserve of greater

duration depending on the type of construction and the economics involved in such construction. The telephone companies generally attempt to engineer for a three-year growth in outside cable plant facilities and for a one- to two-year growth factor in central office equipment. Unlike other industries, increased volume and increased installations do not necessarily mean increased profits for the telephone utilities. In many instances increased volume can mean less net earnings where the unit costs of servicing the investment exceeds additional unit revenue derived. This is particularly true in sparsely populated areas requiring high investment per station. The same unit profit squeeze may also be evident in meeting demands for higher grades of service; for example, because of rate differentials where a subscriber who had been receiving four-party service asks for and receives a one-party service the increased revenue per unit may not keep pace with the additional investment and expense.

C. DEMANDS FOR SERVICE

The telephone companies in North Carolina for several years have been faced with an enormous challenge in meeting demands for service. However, as more and more telephone service is extended throughout the state, the overall problem changes somewhat from satisfying demands for service, on which the Commission and the companies have placed special emphasis, to satisfying demands for better quality and upgraded service.

D. EXTENDED AREA SERVICE (EAS)

Extended Area Service is the industry term applied to the extension of local calling from one telephone exchange to and from another exchange without a toll charge being levied. Extended area coverage was approved for five companies in 1982, two companies in 1983, and four companies in 1984.

E. TELEPHONE RATES—COMMENTS

Local Exchange Rates

These are the monthly charges for basic telephone service as fixed by the Commission. These rates are divided between residential and commercial telephones and are graduated upward from four-party to single-party service. Local exchange rates for a particular company are fixed on a companywide basis according to the calling scope of the particular exchange; i.e., the number of main stations and PBX trunks in an exchange which a single subscriber may telephone without toll charge. These rate groupings are not standard among the companies. Figure No. 6-6 shows rate groupings with rates for the regulated telephone companies.

The practical result of the foregoing "value of service principle" is that a company's subscri-

ers in an urban area will pay a higher monthly local exchange rate than the same company's subscribers in a community having a substantially smaller number of telephones that can be called without a toll charge. Thus, unlike electric and natural gas utilities which have standard rates applicable to a customer classification companywide, the telephone companies have different rates for basic service depending upon the telephone population or calling scope in the particular exchange. Telephone rates also vary substantially between companies and states. Figure No. 6-7 shows local service telephone monthly rates for selected out-of-state exchanges. The out-of-state companies shown were selected mainly because exchange sizes and population are comparable to North Carolina. The use of this data for comparative purposes is limited and must be used with discretion. It illustrates the wide disparities in rates between companies and states.

Toll Charges

Calls between two separate exchanges are "long distance" or toll charge calls, unless arrangements have been made for extended area (toll-free) service. Intrastate toll charges in North Carolina are uniform throughout the State. See Figure No. 6-8.

Two- and Four-Party Service

Two-party and four-party service in North Carolina was 3.5% of total lines in 1982 and has been reduced to 2.0% of the total lines in 1983.

Five- and Multi-Party Services

The number of five- and multi-party services in the State was reduced to -0- and 46, respectively, during 1978 and was completely eliminated during the 1979-80 period.

Service Charges

These are the charges made for installing, moving, and changing telephone instruments. These charges have been increased for some companies in the past few years mostly in rate case proceedings to make them more cost-related. Figure No. 6-1 shows some typical charges by selected companies for various services relating to installing a telephone.

Special Charges

Certain special equipment, such as key systems and private branch exchange systems, require special rates and special consideration by the Commission. These rates are fixed individually on a case-by-case and company-by-company basis and vary widely because of variances in equipment and operating characteristics.

F. RATE INCREASES APPROVED

During 1983, as in the past, much time was required in formal hearings for telephone com-

panies. Preparation and local hearing time effort associated with the general rate proceedings increased the Commission workload more than any other single telephone matter. In 1983 thirty-six percent of the amount requested by the telephone companies was granted in general rate proceedings. Details of the general rate increases for 1983 are shown in Figure No. 6-2.

G. WESTERN UNION OFFICES

In recent years, as large businesses made growing use of their telex and TWX terminal capability for originating telegrams, and as smaller businesses and the general public increasingly availed themselves of telephone convenience for sending their telegrams, the need for independent offices and branches owned by Western Union steadily declined in the United States and in North Carolina. For example there were 860 such offices in 1971 nationwide and 25 in North Carolina, and in 1983 they have declined to 144 and 5 respectively. Less than 10% of public message traffic is accepted over the counter; and most of that traffic is money order business.

The number of agency or commission offices have remained fairly constant. They are most often small “mom and pop” operations by persons other than employees of Western Union. In 1971 there were 6,913 of these type operators nationwide and 249 in North Carolina.

The following illustrates the number of Western Union offices in the United States and in North Carolina:

	United States		North Carolina	
	1982	1983	1982	1983
Independent Offices & Branches	148	144	5	5
Joint Offices	0	0	0	0
Agency or Commission Offices	5840	6123	217	224
Total	5988	6267	222	229

As of August 3, 1982, the Utilities Commission no longer regulates The Western Union Telegraph Company (Docket No. WU 111).

H. RADIO COMMON CARRIERS

There are thirteen Radio Common Carriers (RCCs) certified to operate in North Carolina. These RCCs provide two-way mobile telephone service and one-way radio paging service to approximately 15,000 units within the State. The services offered by RCCs generally include automatic dial as well as manual operation for mobile units and pagers. Interconnection with the land-line telephone network is provided in order to permit direct communications between landline telephones and RCC mobile/paging units.

The growth of RCC two-way mobile units has been hampered by the limited number of VHF

radio channels available from the Federal Communications Commission (FCC). While the demand for RCC service has been increasing in the metropolitan areas, the limited number of radio channels has restricted the number of subscribers an RCC could serve and still maintain an acceptable quality of service. It is anticipated that most future mobile telephone growth will have to be met through the use of higher frequency channels in the 450 MHz or 900 MHz bands.

During 1982 the Commission granted a general rate increase to Anser-Quik Enterprises, Inc. There were no general rate cases for the thirteen radio common carriers in 1983.

Cellular Radio Technology

Two-way mobile radio service is now provided by mobile radio carriers. It may be described as “party-line” service, much of it manually dispatched and its grade of service is poor due to present FCC channel loading criteria. Two-way service is not of the efficiency and speed now needed by the public. Technology is now available to enhance, improve, and add to two-way radio service. This vastly enhanced two-way service is popularly called “cellular mobile radio service.” Under the “cellular” technology the number of radio base stations is expanded so that as a two-way mobile radio subscriber moves through the service area his call is automatically and instantly “handed off” from one base station to another so that a subscriber may originate and terminate calls from any point within the service area. Two or more callers can share the facilities simultaneously. Central switching equipment automatically routes calls through interconnection with the land-line telephone network so that mobile-to-land and land-to-mobile calls can be completed, as well as mobile-to-mobile calls. Unlike the conventional two-way calling now offered by most of the mobile radio common carriers in their franchised areas, the “cellular mobile radio” system has a built-in capacity to expand as public demand increases, with a grade of service comparable to land-line telephone service.

The Federal Communications Commission, which allocates frequencies, grants facility construction permits, and licenses facilities involved in one-way and two-way mobile radio systems, has identified ninety markets (Cellular Geographic Service Area [CGSA]) nationwide in which the public demand and need will justify cellular enhancement. Accordingly the FCC has allocated two 20 MHz groups of channels to each market. Initially one license will be available to radio common carriers. During 1984 the following companies have applied for FCC licenses and certificates from the North Carolina Utilities Commission enabling them to offer cellular services:

I. SOURCE AND DISPOSITION OF REVENUES—COMMENTS

The telephone companies derived about 44.2% of their revenues from local charges, 51.8% from toll charges, and 4.0% from miscellaneous services in 1983 compared to 44.6%, 52.0%, and 3.4% in 1982. These ratios have not changed drastically on a year-to-year basis, but the long-term trend (1965-1983) was an increasing amount from toll service. However, as shown on Figure 6-9, toll revenue is producing a consistent percentage of total revenue; 54.0% in 1980, 53.8% in 1981, 52.0% in 1982, and 51.8% 1983.

The components of the disposition of the revenue dollar as shown on Figure No. 6-9 indicates that for the year 1983 compared to 1982 operating expenses and interest decreased while income taxes, dividends, depreciation, and retained earnings all increased slightly.

J. PLANT INVESTMENTS—COMMENTS

The regulated telephone companies increased gross plant investment in North Carolina 9.6% in

1978, 9.2% in 1980, 7.0% in 1982, and 6.0% in 1983. These increases represent investments of \$266 million in 1978, \$281 million in 1980, \$253 million in 1982 and brings the total gross investment at December 31, 1983, to \$4,351,511,000.

Figure No. 6-10 shows investment per access line 1982 and 1983 on a North Carolina industrywide basis. Figure No. 6-11 shows investment per telephone for the regulated telephone companies for the years 1960, 1965, 1970, 1975, 1980, and 1981. Figure No. 6-12 shows the investment per access line as of December 31, 1982, and 1983. The information shown in Figure No. 6-12 indicates the variances in this important cost element of providing telephone service, and these variances in plant cost contribute to the variances in telephone rates between companies.

K. STATISTICAL SUMMARY DATA

Total operating revenues of the telephone companies increased in 1983 over 1982 by a total of 7.3%. Operating expenses increased by 6.4% in 1983, and net operating income increased 11.5% for the same period. Salaries and wages increased by 3.1% in 1983 over 1982. Total salaries and wages paid by the telephone companies in 1983 were more than \$506 million compared to \$490 million in 1982. The total average number of employees decreased to 20,106 in 1983 from 21,254 in 1982, a decrease of 5.4%. A detailed account of these and other selected items is shown in Figure No. 6-13.

¹ALLTEL Carolina Telephone Co. was formerly Mid-Carolina Telephone. The name change was approved by the Commission on 2-13-84. (P118, Sub 32)

²Westco Tel. Co. and Western Tel. Co. were merged into Continental Tel. Co. of North Carolina. The Commission approved the merger on 12-12-79. (P-128)

FIGURE NO. 6-5

ACCESS LINES IN SERVICE AS OF DECEMBER 31, 1982 AND 1983
(N. C. Data Only)

Access Line — A telephone company facility which allows access to and/or from the exchange network. Access line includes the following categories of service: individual line, two-and four-party service, key trunk, rotary line, PBX trunk, centrex trunk, 800 service and outwats (interstate and intrastate), L.D. trunk (toll terminal), foreign exchange, semi-public, public, mobile telephone, and service station (farmer line.) The total number of access lines in service at December 31, 1983, were 2,447,116 compared to 2,391,651 access lines at the end of 1982. (P-100, Sub 58)

A. GENERAL COMMENTS

As of December 31, 1983, there were 957 regulated water and sewer systems in North Carolina owned by 375 companies. These are comprised of 877 water and 80 sewer systems. This shows an increase of 8.3% in total systems from the previous year. The General Statutes of North Carolina provide in part that anyone owning or operating facilities for furnishing water and sewer service to the public for compensation is a public utility, except when such person's sole operation consists of selling water to fewer than ten residential customers. Specifically exempt from regulation under the statutes are municipalities, sanitary districts, and anyone who furnishes water or sewer service to himself, his tenants, or his employees. The statutes also exempt certain consumer-owned corporations.

Figure Nos. 7-1 and 7-2 show a map and, in chart form, the locations of the water and sewer systems by counties with the number of systems and customers in each county.

In 1983 approximately 88% of the regulated companies received less than \$50,000 in annual revenues, and only seven companies received more than \$500,000. In 1982 approximately 96% of the companies received less than \$50,000 in annual revenues, and only four companies received more than \$500,000. Approximately 68% of the water and sewer companies served fewer than 100 customers in 1983 compared to 69% of the companies in 1982.

One of the major problems encountered in regulating small water and sewer utilities is the lack of keeping adequate records. Many small utility owners quite possibly subsidize operations for several years because their records, which are required for filing and justifying rate increases, are inadequate. As a result, of the 375 companies franchised to operate in 1983, current statistical operating data is only included for 286 of the companies. This data is found in Figure No. 7-3. For the other 89 companies, the most recent statistical data received by the Commission is presented in Figure No. 7-4. This noncurrent statistical data is included to illustrate the total scope of the regulated water and sewer industry in North Carolina.

The Commission has adopted a simplified (2-page) annual report which should encourage Class D utilities to maintain minimum records of their expenses. This should enable small companies to keep accurate records and provide them with the required information needed for general rate cases.

There has been a trend for larger utilities to absorb smaller ones. This enables the customers to obtain the benefit of a large customer base, more expertise in utility operations, and better response to service problems. In addition, larger utilities are more capable of obtaining financing for capital improvements which has proven to be a serious problem for smaller operations.

In 1983 approximately 52% of the customers of regulated water companies in North Carolina received metered service, and approximately 49% of the customers were furnished water treated in some manner, usually by chlorination. In some systems water is treated with phosphates to control excess iron, and a few systems have filters for iron removal. Approximately 14% of the customers are served by water systems having fire protection capability. A few of the companies purchase water from municipalities for resale to their customers, but most of the companies supply water by means of deep wells.

B. COMMISSION ACTIVITIES

During 1983 applications for general rate increases were filed by 41 water and/or sewer companies. Forty-eight water and sewer companies filed for general rate increases in 1982. These requests for additional revenues totaled \$1,128,688 in 1982 and \$1,433,584 in 1983.

Applications for new franchises totaled 31 in 1983, the same number as 1982. In addition there were 25 requests for transfers of franchise, up from 15 in 1982. There were 27 miscellaneous proceedings such as formal complaints, stock transfers, mergers, show cause proceedings, and trusteeship—emergency operator proceedings. There were 11 of these type proceedings in 1982.

C. REGULATED VS. NONREGULATED MONTHLY CHARGES

Comparative monthly charges for residential water service between selected nonregulated municipal systems and regulated water systems in North Carolina are shown in Figure No. 7-8. This also shows the same comparable component for residential sewer service in North Carolina for the same period.

The Outside City Limits charges for municipal systems vary from 1 to 2 1/2 times the Inside City Limit rates.

D. STATISTICAL SUMMARY

The number of regulated utility companies furnishing water and sewer service in North Carolina was 375, the same as 1982. These companies operated 877 water systems and 80 sewer systems within the State. They served 99,556 water and sewer customers and received \$12,650,722 in annual revenues. See Figure No. 7-7 for a graphic presentation.

Of the 375 water and sewer companies regulated as of December 31, 1983, seven water companies and seven water/sewer companies had records in sufficient detail to provide some comparative data to be developed for this report. The individual financial and statistical data for these 14 companies for the year 1983 is shown on Figure Nos. 7-5 and 7-6.

Caution should be used in applying the results of the data shown for these 14 companies to any

specific situation. The data is taken directly from the annual reports without any adjustments. Experience has shown that the Commission usually makes substantial adjustments to the data filed by water and water/sewer companies for rate-making purposes. The adjustments are most frequently made to the plant accounts and the related depreciation expenses claimed against the plant investment. Most of the adjustments are downward to reflect the elimination of plant con-

tributed or plant investment recovered by the developers or owners through the sales price of the lots in subdivisions. Often, there are downward adjustments in both the plant account and in operation expenses due to the system's having unreasonably large unused customer capacity during the early stage of development. In view of these limitations, the average water usage and revenues per customer have the most valuable use for comparative or planning purposes.

VIII. Securities, Audits, And Annual Reports

A. SECURITIES ISSUES—COMMENTS

The Commission approved 12 applications for the issuance of electric, gas, and telephone securities and borrowings during 1983 compared to 14 applications in 1982. The 1983 applications covered \$229,095,000 compared to \$1,211,000,000 in 1982.

The securities applications are processed by personnel in the Finance, Statistics, Budget, and Planning Division of the Commission Staff, and reports and recommendations are made to the Commissioners. These reports evaluate and consider many factors such as: (1) The present and projected earnings position of the company, (2) the effect of the projected issue on the company's capital structure, (3) the expense of the issue, (4) the estimated net yield, (5) the probable market price per unit, (6) the purpose of the issue, (7) the use to which the proceeds are to be applied, (8) whether the issue is compatible with the overall public interest, and (9) the merits of the proposed method of marketing the securities; i.e., by competitive bidding, negotiations, or private placement.

The new capital raised through the sale of securities is primarily for the replacement of short-term borrowings, which have been used largely for new utility plant construction, modernization, and improvement of existing plant to meet increased demands for additional and improved service. Figure No. 8-1 shows detailed data for each securities issue approved by the Commissioners in 1983.

B. AUDITS AND EXAMINATIONS—COMMENTS

Personnel of the Commission's Public Staff Accounting Division perform extensive field audits

of the operations of public utilities. The results of each of these audits are a part of the Public Staff's position on matters before the Commission, and they are filed with the Chief Clerk as an official document if they are part of a general rate case proceeding. A brief summary of audits and special studies for 1983 follows:

Utility and Type Audit	1983 Number of Examinations
Electric	5
Gas	
General Rate Case & Earnings Investigation	3
Increased Cost of Purchased Gas, Exploration Surcharges, and Emergency Gas	
Curtailments	31
Telephone	11
Water and Sewer	41
Motor Freight and Motor Passenger	
Operating Ratios and Tariffs	54
Total	145

C. ANNUAL REPORTS—COMMENTS

For the years 1982 and 1983 there were 1,361 and 1,446 utilities, respectively, required to file annual reports of their operations with the Commission. This number includes 80 nonregulated municipal utility systems. The regulated utilities and the municipal utility systems' annual reports required to be filed with the Commission are prepared on forms furnished to them by the Commission's Public Staff Accounting Division. All completed and returned annual reports of the larger utilities are reviewed in detail for compliance with the Uniform System of Accounts.

(A)Issues of Common Stock authorized by Commission for use in various stock purchase and Employee Benefit Plans. Valuation of the shares are normally based on market price when issued.

IX. The Transportation Industry - Motor Freight Carriers

MOTOR FREIGHT CARRIERS

A. GENERAL COMMENTS

Motor freight carriers are divided into three groups according to annual operating revenues. The history of motor freight carriers' size classification is as follows:

Period & Source	Gross Operating Revenues		
	Class I	Class II	Class III
1963-1969, R-2-48 (9-18-63)	\$1,000,000 or more	\$200,000- \$1,000,000	\$200,000 or under
1970-1973, M-100, Sub 25 (9-15-69)	\$1,000,000 or more	\$300,000- \$1,000,000	\$300,000 or under
1974-1979, M-100, Sub 53 (5-24-75)	\$3,000,000 or more	\$500,000- \$3,000,000	\$500,000 or under
1980- M-100, Sub 68 (2-5-82)	\$5,000,000 or more	\$1,000,000- \$5,000,000	\$1,000,000 or under

The Class I and II carriers generally transport both intrastate and interstate freight while the Class III carriers predominately operate only in intrastate commerce.

There were 825 regulated motor carriers as of December 31, 1983. In 1983 the 110 Class I carriers and 116 Class II carriers accounted for approximately 90% of the total motor freight revenues generated in North Carolina.

Transfer of Insurance and Registration to DMV

Senate Bill 23 which was ratified July 15, 1983, transferred from the Commission to the N.C. Division of Motor Vehicles all functions relating to the safety enforcement of motor carriers, the registration of vehicles, the filing of insurance, and the issuance of exemption certificates. This leaves the Commission with jurisdiction over market entry and rates for motor carriers which is administered by the Transportation Division.

B. DUTIES OF THE TRANSPORTATION DIVISION

Intrastate

The Commission Staff Transportation Division is charged with the economic and safety regulation of all certified motor freight carriers operating within the borders of the State. All applications for new authority grants, transfers of certificates, and cancellations of certificates are handled through this Division. Also, all complaints relating to the quality of freight service, or the lack of it, are investigated by the Division.

The Public Staff Transportation Rates Division has the responsibility for maintaining up-to-date files of current rate and service tariffs of all intrastate transportation utility companies. In addition the Public Staff reviews all applications for new or amended rate tariffs. In contested rate cases, rule-making investigations, abandonments, mergers, and related matters, the Public Staff presents testimony in support of the position of the using and consuming public before the Commission.

The Public Staff has developed and implemented rate-making rules and procedures designed to provide cost-of-service data for the

North Carolina portion of service furnished by the various transportation companies under regulation. The purpose of the cost data is to assure that the companies charge the lowest level of reasonable rates.

The Public Staff offers technical assistance to the Commission and the general public in dealing with transportation matters and investigates consumer complaints involving any regulated transportation utility company.

C. COMMISSION ACTIVITIES

During 1983 a total of 68, or 30%, of the Commission's 227 formal hearings were related to the trucking industry; for 1982 the number of truck hearings was 48 and represented 25.8% of the 186 formal hearings. The Commission sometimes settles tariff filings and other filings based on Public Staff and Commission Staff studies and recommendations presented at Monday morning conference sessions. During these sessions, if there are no protests and the need for the requested changes are either sanctioned by or undisputed by either staff, they are allowed to become effective without holding a formal hearing as in the past.

D. IMPACT OF MOTOR CARRIER REFORM ACT OF 1980

A bill (Senate Bill 2245) to encourage the deregulation of the trucking industry was signed into law on July 1, 1980. The Motor Carrier Reform Act of 1980 was designed to reduce unnecessary regulation by the Federal government. This act increases opportunities for firms in the trucking industry to operate without interference from the government.

The primary purpose of the act is to enhance competition by allowing for easier entry into the trucking field, the removal of certain operating restrictions, and the establishment of certain motor carrier flexibility. S2245 adopts a new section which reflects the strong belief that competition will bring about the most efficient and economical delivery of transportation service to the public. The Motor Carrier Reform Act of 1980 relaxes the requirements for trucks wanting to enter the market and lets the existing trucking companies easily expand their operations. The new entry section retains the traditional test that all applicants must be fit, willing, and able. However, this reform act creates the presumption that all proposed transportation is in the public interest; and therefore, a diversion of revenue or traffic from the proposed carrier is not of itself inconsistent with the public convenience and necessity. There must be sufficient evidence that the transportation would be inconsistent with the present or future public convenience and necessity to justify denial of an application. Secondly,

inefficient and fuel wasteful operating restrictions are removed under this act. Also, motor carriers are allowed to remove additional operating restrictions from their certificates and permits which are not productive or are energy wasteful. The reform act also encourages rate flexibility. In the future carriers will have the ability to price their services within certain limits substantially free of Federal regulation.

The Motor Carrier Reform Act of 1980 provides a three-year transition from the new regulatory environment with major changes in ratemaking beginning in July 1983. This act is Federal legislation and, therefore, affects only interstate commerce. The number of vehicles which have previously been registered with the Commission and will be registered with the N.C. Division of Motor Vehicles in subsequent periods by interstate carriers will be increasing significantly in the future.

The following tabulation shows motor carriers which hold authority from the Commission classified by type.

Type	1975	1980	1981	1982	1983
Common	524	555	536	554	666
Contract	86	120	132	136	137
Common & Contract	21	25	22	18	21
Railroad Motor	5	5	5	4	1
Total	636	705	695	712	825

“Common carrier by motor vehicle” means any person who holds himself out to the general public to engage in the transportation by motor vehicle in intrastate commerce of persons or property of any class or classes thereof for compensation, whether over regular or irregular routes, except as exempted in G.S. 62-260.

“Contract carrier by motor vehicle” means any

person who, under an individual contract or agreement with another person and with such additional persons as may be approved by the Utilities Commission, engages in the transportation other than the transportation referred to in the above paragraph, by motor vehicle of persons or property in intrastate commerce for compensation, except as exempted in G.S. 62-260.

E. SUMMARY OF OPERATING DATA

A list of the Class I and II motor freight carriers, with selected operating financial data is shown in Figure Nos. 9-1 and 9-2. Data for the Class III motor freight carriers is listed in Figure No. 9-3.

There were 480 Class III motor carriers filing 1983 annual reports with the North Carolina Utilities Commission. Often useful data for many of the Class III carriers is not available and in many instances is nonexistent. Therefore, the reported data does not reflect information for all the certified Class III motor carriers operating in North Carolina.

A summary of selected data for the Class I and II carriers for the 1983 calendar year is shown in Figure No. 9-4. It should be noted that the operating revenues for North Carolina are from freight moved on intrastate tariffs regulated by the North Carolina Commission only; therefore, they account for a very small percentage of the total revenues generated by this group of carriers (3%). Reports for years prior to 1979 have shown total North Carolina revenues to be about 8% to 10% of total systemwide revenues. The prior years' data included revenues which were generated from freight moved on both North Carolina (intrastate) and Interstate Commerce Commission (interstate) tariffs.

Total Salaries Paid (\$-000's)	\$ 669,613	\$ 478,246	28.6

The number of carriers in each classification changes each year because of the companies' growth in revenue and the changes every few years in the level of revenues required to qualify for the Class I and II classifications. Therefore, the use of the data for comparative purposes must be used with discretion.

X. The Transportation Industry - Motor Passenger Carriers

A. General Comments

1. Regulated Privately Owned Sectors

For the purpose of filing annual reports, both the Interstate Commerce Commission (ICC) and the North Carolina Utilities Commission (NCUC) authorized the following classifications effective January 1, 1980, for the motor passenger carriers:

Classification Requirements	
Class I	\$3,000,000 or more annual operating revenues
Class II	\$500,000-\$3,000,000 annual operating revenues
Class III	Under \$500,000 annual operating revenues

At December 31, 1983, there were 115 motor passenger carriers franchised to operate under the regulation of the North Carolina Utilities Commission. See Figure No. 10-1 for a list of the companies and their scope of operations. These three carriers, Duke Power Company in Durham, Duke Power Company in Greensboro, and Charlotte City Coach Lines, are franchised by the governing authorities of the municipalities in which they operate. The Commission's jurisdiction over these carriers is limited to the approval or disapproval of fares and to the annual filing of reports of operations. The remaining 112 carriers are fully regulated by the Commission. Of these remaining carriers, 59 are transportation brokers and three are motor boat common carriers. Transportation brokers, as herein used, means any person not a bonafide employee or agent of a motor carrier who engages in the business of selling or offering for sale any transportation of passengers by motor carriers for compensation either directly or indirectly. A transportation broker does not own or operate the vehicles used to transport passengers to whom he sells or arranges for this type of service. There is no operating data for these 62 carriers involved in this report. Operating data is included for the 38 motor passenger carriers who filed 1983 annual reports with the Commission.

2. Nonregulated Publicly Owned Sector

The North Carolina Utilities Commission has no jurisdiction over most of the passenger transit systems serving the intracity traffic and the urban and rural areas. However, these systems are providing transportation to large numbers of intracity passengers as shown by the following ridership figures:

Unregulated Intracity Ridership	
Calendar Year	Passengers
1981	22,866,452*
1982	22,553,958*
1983	21,221,389*

*Source: Public Transportation Division—North Carolina Department of Public Transportation—Systems included in the data are Asheville, Chapel Hill, Charlotte, Fayetteville, Gastonia, Greenville, High Point, Raleigh, Salisbury, Wilmington, Wilson, and Winston-

Since July 1, 1974, there has been a Public Transportation Division (PTD) within the Department of Transportation. The PTD administers several federal grant programs and a state grant program as well as fostering the development of the public transportation in North Carolina. For further information on this agency's activities, the N. C. Department of Transportation, P. O. Box 25201, Raleigh, North Carolina 27602, should be contacted.

Bus Deregulation

The Bus Regulatory Reform Act of 1982 enacted by Congress granted intercity bus companies wide-ranging freedoms to adjust their services and rates. One possible by-product of the Act may be the loss of service to numerous small communities across the State. Bus transportation is usually the last form of public transportation available to these communities, hence if they lose bus service they are normally left isolated from the public transportation network. Furthermore, the demographic profiles of small communities show a much higher percentage of elderly than the State average. These are the people who need bus service the most, and as time goes by their need for service will become even greater.

Under the Bus Regulatory Act of 1982, if an intercity bus company files with the Commission for an increase in its rates, and the Commission approves a level of rates which is less than that requested, the carrier can then appeal the Commission's decision to the ICC. Under the Bus Act, the ICC is compelled to grant the carrier the full relief sought if the intrastate rates are less than similar interstate rates. Since the enactment of the Bus Act, all proceedings in which the Commission denied the rate relief sought in whole or in part, and the request was appealed to the ICC, the ICC granted the full relief sought. See Figure No. 10-5.

B. Intercity Motor Passenger Carriers

Financial and statistical data is presented for the 28 regulated intercity carriers having separate operations during 1982 and 1983 who filed annual reports with the North Carolina Utilities Commission. The intercity carriers have franchised and operating rights to serve two or more points and are further classed and operate as common or contract carriers over interstate or intrastate routes.

The following table shows the breakdown of these classifications as of December 31, 1982, and 1983:

Salem. The bus systems in Durham and Greensboro are regulated and owned by Duke Power Company. The ridership for these systems is omitted from this data.

	1982	1983
Classification	Number of Carriers	Number of Carriers
Class I	4	4
Class II	8	8
Class III	16	16
Total	28	28
Type Carrier		
Common	24	28
Contract	4	0
Total	28	28
Scope of Operations		
Interstate	13	11

C. Fare Increases Authorized—Intercity

The following intercity motor passenger carriers were authorized passenger fare increases in 1983:

- (a) Trailways Southeastern Lines, Inc. (Docket No. B-69, Sub 135), 18%
- (b) Greyhound Lines, Inc. (Docket No. B-7, Sub 100), 20%

D. Statistical Summary Data—Intercity

In 1983 the four Class I intercity motor passenger carriers accounted for 74.6% of the North Carolina total intercity gross operating revenues, just slightly lower than the 76.4% in 1982. For their North Carolina operations the 1983 carriers experienced an 8.7% decline from their 1982 operations.

Systemwide operations for the Class I carriers in 1982 showed a decrease of 16.4% in operating revenues compared to 1982. There was a 12.2% decrease in operating expenses in 1983. The operating ratio was 104.5% in 1983 compared to 99.5% in 1982.

E. Intracity Motor Passenger Carriers—Comments

During 1983 there were eleven intracity carriers operating under the jurisdiction of the North Carolina Utilities Commission who filed their annual reports. There were only eight carriers who filed 1982 data. These intracity carriers are grouped as follows regarding size, type, and scope of operations.

	1982	1983
Classification	Number of Carriers	Number of Carriers
Class I	0	0
Class II	3	2
Class III	5	9
Total	8	11
Type Carrier		
Common	6	9
Contract	2	2
Total	8	11
Scope of Operations		
Interstate	2	1

In 1981 Duke Power Company Bus Systems of Greensboro and Durham were both authorized charter fare increases (Docket No. B-209, Sub 23 and Sub 24). There were no fare increases authorized in either 1982 or 1983 for intracity carriers.

G. Statistical Summary Data—Intracity

Figure No. 10-4 shows a summary of selected income items and operational statistics for the calendar years 1982 and 1983 for the intracity motor passenger carriers. There are no Class I carriers presently in this group. Information is given for the eleven carriers who filed 1983 annual reports.

Footnotes:

(A) Franchised by municipalities; fares only regulated by the N.C. Utilities Commission.

(B) Name changed from Continental Southeastern Lines, Inc.

(C) Has both intercity and intracity operations, but for statistical purposes will be treated as an intracity carrier since most operating revenue is derived from intracity operations.

(D) Has both intercity and intracity operations, but for statistical purposes will be treated as an intercity carrier since most operating revenue is derived from intercity operations.

¹The operating revenues for Asheville Carriage Service include income from noncarrier operations.

²The ownership and authority of Central Bus Lines of N.C. was transferred to McBroom Coach, Inc., on April 29, 1983. (Docket No. B-392).

³T & D Tours changed its name to Dunn Management Services, Inc., on June 12, 1984. (Docket No. 389, Sub 2).

⁴The operating authority of Hacaronee Bus Service was cancelled on April 4, 1984. (Docket No. B-355, Sub 1).

⁵This is the first year Joshlis Charter has been authorized to operate. (Docket No. B-405 dated August 26, 1983)

⁶This is the first year King's Bus Service has been authorized to operate. (Docket No. B-416 dated April 3, 1984).

⁷This is the first year McBroom Coach has been authorized to operate. The authority was purchased from Central Bus Lines of N.C. in Docket No. B-392 dated April 29, 1983.

⁸Travelines of Carolina Ltd. filed an annual report for 1982 and 1983 indicating there were no operations in either year.

*The following companies filed 1982 annual reports indicating there were no operations. These companies have all been sold to American Charter, Ltd:

Gaston-Lincoln Transit Co. (Docket No. B-366, Sub 1), 4-29-83

City Coach Company (Docket No. B-366, Sub 2), 4-29-83

Gastonia Transit Co. (Docket No. B-366, Sub 3), 4-29-83

City Tours & Charters (Docket No. B-366, Sub 4), 10-25-84

N/A — A report was filed but this information was not available.

N/R — No report was filed with the N.C. Utilities Commission.

A. RAILROAD COMPANIES OPERATING IN NORTH CAROLINA 1983

Twenty railroad companies operated 3,886 miles of trackage in North Carolina as of December 31, 1983. Figure No. 11-1 is a map of the North Carolina Railroad System and Figure No. 11-2 shows a list of railroads franchised to operate as of December 31, 1982, and 1983. The State's rail system is well-developed with service available to many towns and to all regions of the state. Ninety of the state's one hundred counties receive rail service.

In North Carolina railroads are viewed as a very important element in the State's total freight transportation system, delivering many of the materials needed to run North Carolina's economy. The State's agricultural and wood product industries have relied on convenient and economical rail service. The coal-fired utility plants, which generate electricity for North Carolina industries, depend on rail for coal delivery.

In January 1978 the Interstate Commerce Commission (ICC) and the North Carolina Utilities Commission (NCUC) reclassified the railroads as follows:

Class I — \$50,000,000 or more annual revenues

Class II — \$10,000,000-\$50,000,000 annual revenues

Class III — Less than \$10,000,000 annual revenues

At December 31, 1983, there were three Class I railroads, one Class II railroad, and sixteen Class III railroads.

Although there are twenty separately identified rail companies serving North Carolina, most of the state's rail transport needs are provided by two large, well-established companies. Seaboard System Railroad Company and Southern Railway Company, together with their affiliates, control over 90% of the track-miles located in the state. The other Class I railroad presently serving North Carolina is Norfolk-Western Railway Company, which recently merged with Southern to form the Norfolk Southern Corporation.

B. PASSENGER SERVICE THROUGH NORTH CAROLINA

In North Carolina railroads not only contribute to commodity movements, they also provide for intercity passenger movements. During 1983 four trains per day provided regularly scheduled passenger service. Each was owned and operated by the National Railroad Passenger Corporation (AMTRAK). AMTRAK was established in 1970 to relieve railroads of the responsibility of providing rail passenger services. When AMTRAK was formed only two railroads provided passenger service in North Carolina: Seaboard Coast Line Railroad Company (SCL) and Southern Railway Company (Sou).

Seaboard Coast Line Railroad Company joined AMTRAK, and as a result AMTRAK now operates passenger trains over the rails of SCL Nos.

81 and 82, The Silver Star, between New York and Miami, Florida, with stops at Raleigh and Hamlet, North Carolina; Nos. 83 and 84, The Silver Meteor, between Boston, Massachusetts, and Miami, Florida, serving Rocky Mount, North Carolina, as a conditional stop; and Nos. 85 and 86, the Champion, operating between Boston, Massachusetts, and St. Petersburg, Florida, with stops at Rocky Mount, Wilson, and Fayetteville, North Carolina.

On April 6, 1978, Southern Railway Company filed an application with the ICC to discontinue operation of its last passenger train operating in North Carolina. On or about February 1979 AMTRAK took over and began operation of the Southern Crescent, Nos. 1 and 2, operating between Washington, D.C., and Atlanta, Georgia, which was the last independent rail service in North Carolina provided on regular schedules.

The federal budget cuts made in 1981 forced major revisions in AMTRAK's overall service but did not affect service to North Carolina. With the addition of new or rebuilt equipment on all North Carolina routes, service has become more attractive and reliable; however, increased fares may be necessary to absorb the cost of these improvements.

C. RAIL SAFETY ACTIVITY BY COMMISSION

During 1983, as in previous years, the Utilities Commission was very active in the investigation and surveillance of the condition of rail trackage and other rail equipment and facilities in an effort to minimize the frequency and severity of rail accidents caused by inadequate maintenance and/or malfunctioning equipment.

During the period 1973-1983 the Commission enlarged the scope of its rail safety program by the addition of three Rail Safety Engineers whose sphere of responsibility includes the inspection of all rail trackage and rail equipment in North Carolina.

The duties of these three engineers encompassed on-site inspection of track conditions and equipment, and investigations of train accidents. A written report is filed concerning each inspection, and any defect found is required to be corrected. In addition to on-site inspections, these engineers also conduct inspections of company records to ensure compliance with the rail safety regulations. The Federal Railroad Administration reimburses the transportation division for 50% of their expenditures in this rail safety program.

D. MOBILE AGENCY CONCEPT AND STATION CLOSINGS IN NORTH CAROLINA

Mobile Agency Concept

A major innovation in rail freight transportation has been the implementation, upon Commission approval after investigation and hearing, of a mobile agency concept in North Caro-

lina. This concept has replaced the fixed agent (serving one town on a five-day, 40-hour week or less basis) with a mobile agent operating a special radio-equipped van, serving by highway several small towns in a given area. On a variable route six days per week the agent calls on railroad customers in their respective places of business, rather than the customer having to go to the railroad station as in the past.

The area served by the mobile agent is also served by a special telephone system connected to a central, or base agency, station manned 13 hours per day, six days per week. This station is connected by a Telex system to a car information computer center. Any customers in the area, by dialing a special number, can talk directly to the personnel in the base agency toll free and conduct such business with the railroad as is necessary. In addition the base agent, by using the Telex system, can relay almost immediately any car information a customer requests. The base agent, the mobile agent, and the train crews in the vicinity are in constant communication with each other by radio so that customers can be served efficiently.

This concept, with some variations, is in effect in many places throughout the State. The latest mobile agency stations were approved in 1983:

Mobile Agency Stations Approved

R-71, Sub 117	10-13-83	Rocky Mount	Abolish existing Mobile Agency Station and establish a New Mobile Agency Station.
R-71, Sub 119	11-6-83	Spruce Pine	Establish a Mobile Agency Station.

Station Closings

The railroads in 1983 and 1984 continued their activity in consolidating their freight handling operations by requesting permission from the Utilities Commission to discontinue freight handling facilities at several locations. The requests by the companies to close or discontinue service at most of the locations are based on economic factors, with the decreasing volume of freight handled at the particular location being the main reason given.

Figure No. 11-3 lists the companies, locations, and facilities affected by the Commission action after hearings with the general public located in the respective areas.

E. RAIL CROSSINGS

There were 7,786 highway rail crossings in North Carolina in 1983, up from 5,540 in 1982.

The 1983 figure includes an estimate for the number of railway crossings owned by Southern Railway Company. In 1982 they reported more than 5,500 railway crossings in North Carolina. The 1983 total crossings figure is an estimate from the N.C. Highway Division. During 1983 there were 19 deaths and 99 injuries resulting from accidents involving highway rail crossings. In 1982 there were nine deaths and 63 injuries. The Utilities Commission has very limited jurisdiction in the elimination of grade crossings and the erection of signaling devices at them. The jurisdiction over State highway system roads and links therein, including the proration of costs of relocation and signaling devices, is in the Highway Commission, with a statutory provision that 90% of such costs are to be borne by the Highway Commission.

F. STATISTICAL SUMMARY DATA

Operating revenues of all the railroads decreased in 1983 over 1982. The portion allocated to North Carolina decreased by 7.7% and by 25.0% for the total system. Operating expenses decreased 22.0% for the North Carolina operations and 27.3% for the total system. The North Carolina operating ratio was 86.9% in 1983 compared to 102.8% in 1982. See Figure No. 11-4.

Railway freight activity in North Carolina, as reflected by the tons of revenue freight originating in North Carolina, decreased 1.7% in 1983 over 1982. Figure No. 11-5 shows in detail the types of commodities carried by rail. Lumber, wood products, pulp, paper, and chemicals were the leading commodities carried by rail in 1983. These commodities were well suited for the rail mode because they are characteristically bulky, high-volume or low-value commodity types.

North Carolina's railroads constitute a well-established and significant industry. They not only support economic prosperity by contributing to state and local taxes, but they also employ many state residents. The number of employees residing in North Carolina and working for the railroads was 6,253 at year end 1983. The total compensation for railroad employees was more than \$158 million with the average salary per worker at \$26,287. See Figure Nos. 11-6, 11-7, and 11-8 for additional financial and statistical data on the operation of all railroads.

¹Before Tax Accruals and Net Rent

²Effective 1/1/78, Class I & II railroads began recording their operation in conformance with the revised Uniform System of accounts, resulting in expense reclassifications which affected the net revenue and the operating ratio. This change is reflected in the periods after 1975. The prior years were not restated to reflect the changes.

³Includes Franchise Tax.

⁴Class III Railroads were exempted from filing an annual report with the North Carolina Utilities Commission (Docket No. R-26, Sub 29, March 5, 1982); therefore, some figures may not reflect all the Class III railroads.

⁵The number of highway rail crossings includes an estimate of crossings owned by Southern Railway Company.

XII. Investigation And Enforcement

INVESTIGATION AND ENFORCEMENT

G.S. 62-277 of the Public Utilities Act of 1963 which became effective January 1, 1964, vested the Transportation Inspectors and Special Investigators employed by the Commission with the same enforcement and police powers as members of the State Highway Patrol in enforcing provisions of the law applicable to motor transportation for which the Utilities Commission has responsibility. The Commission has eleven of these inspectors domiciled throughout the State.

During 1983 these inspectors made investigations or inspections and traveled as shown on Figure 12-1. During 1983 the inspectors, working at check points throughout the State, inspected 532 buses in detail and made limited inspections and observations of 28,525 trucks. A vehicle discovered to have defects which would render it hazardous to operate is grounded on the spot and required to be repaired before being allowed to proceed. This inspection program has contributed much to the safety of the general traveling public and to the motor carrier operations conducted over the highways of this state.

During the course of a year the transportation inspectors and special investigators:

- (a) Inspect and grade all bus passenger stations in the State every ninety days;
- (b) Inspect freight terminals to ensure that the movement of freight is kept current and that facilities have adequate sanitation, safety, security, and space for handling freight;
- (c) Inspect motor carrier's home offices to ensure correct and adequate maintenance of economic, driver, and safety records;
- (d) Make numerous random inspections of shipping documents, motor carrier operations, and cargoes of vehicles engaged in either intrastate or interstate movement of commodities and passengers for conformity with either the North Carolina Public Utilities Act or by the Interstate Commerce Act by cooperative agreement authorized under Public Law 89-170;
- (e) Make numerous random inspections of vehicles, drivers, containers, packaging, shipping documents, labels, markings, and cargoes of vehicles engaged in either intrastate or interstate "for-hire" movements of commodities and passengers for conformity with the Federal Motor Carrier Safety Regulations, Parts 390-398, and the Federal Hazardous Materials Regulations, Parts 170-190, of the U.S. Department of Transportation as adopted under the Commission's rule-making process and by cooperative agreement authorized under Public Law 89-170;
- (f) Furnish information and file written reports on irregularities of vehicles, drivers, motor carrier operations, and cargoes of vehicles

engaged in interstate movements of commodities and passengers to the Interstate Commerce Commission and the U.S. Department of Transportation through cooperative agreements authorized under Public Law 89-170;

- (g) Investigate and file written reports on complaints and irregularities of vehicles, drivers, motor carrier operations, and cargoes of vehicles engaged in intrastate movements of commodities and passengers for the Commission;
- (h) Assess penalties and registration fees to interstate motor carriers not in compliance with registration and insurance requirements of the Commission, pursuant to G.S. 62-266;
- (i) Make an investigation of and file a written report on select motor carrier accidents resulting in the loss of life, serious bodily injury, or property damage in excess of \$5,000 and give conclusions as to the underlying causes of the accident; and
- (j) File written reports on all assigned initiated actions for compliance with Commission statutes and rules regarding complaints, inspections, surveys, investigations, surveillances, service of process, and litigations.

All infractions of safety rules on equipment discovered during the process of an inspection are reported to the Commission. During 1983 there were 121 buses which were found to have defects. Of the above defective buses, there were 41 which failed to pass the equipment and safety factor inspections by the Commission personnel and were grounded on the spot.

All infractions of the economic rules on motor carrier operations discovered during the process of highway inspections and investigations are reported to the Commission. During 1983 there were 1,937 violations, of which 1,700 were interstate motor carrier operations lacking compliance with registration and insurance requirements, resulting in \$37,892 in fees and penalties being collected.

Bus stations were inspected for sanitary and passenger comfort. Each station inspected is graded, and a report is made to the Commission. During 1983 a total of 121 of the 532 bus stations graded were found to need improvement.

Thousands of vehicles of the regulated motor freight carriers and exempt "for-hire" motor freight carriers were checked for equipment safety factors. During 1983 there were 12,483 defects detected and corrected.

By legislative action in the 1983 General Assembly all motor carrier functions except market entry-exit and rates were transferred to the North Carolina Division of Motor Vehicles. This was effective on July 15, 1983. Therefore, the North Carolina Utilities Commission no longer has any responsibilities in the field of motor carrier investigations and enforcements.

FIGURE NO. 12-1

SUMMARY OF INVESTIGATIONS AND INSPECTIONS
FOR THE CALENDAR YEARS 1982 AND 1983

	Number of Items Investigated or Inspected		Vehicles Without Defects		Vehicles With Defects Not Grounded		Vehicles With Defects Grounded		Number of Violations on Vehicles With Defects	
	1982	1983	1982	1983	1982	1983	1982	1983	1982	1983
Number of Full Time Inspectors	11	11	11	11	11	11	11	11	11	11
Bus Stations—For Safety Adequacy & Sanitation:	205	219	50	81	—	—	—	—	—	—
